Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Humanised, semi-chimeric and chimeric antibodies against human high-

affinity IGE receptor - useful medicinally and have low antigenicity in

humans.
Claim 1; Page 13; 26pp; Japanese.
The present complementarity determining region 1 (CDR1), which is from a
murine, anti-human high affinity immunoglobulin E (IGE) receptor,

monoclonal antibody (Mab) light chain variable region, can be used in the
preparation of humanised or semi-chimeric anti-human high affinity IGE
receptor Mab. The Mab can be used to treat or prevent diseases,
specifically allergies, associated with the receptor. The humanised, semi-
chimeric or chimeric Mab have very low antigenicity in humans. (Updated
on 27-AUG-2003 to correct OS field.)

New antibodies that bind to CD3, useful for treating a disease
associated with CD3 expression, such as myelodysplastic syndrome, acute
or chronic myeloid leukemia.
Claim 1; SEQ ID NO 1; 124pp; English.

The present invention describes an isolated anti-CD3 antibody or its
epitope-binding fragment comprising: (a) at least one complementarity-
determining region (CDR); or (b) at least heavy chain variable region
comprising 3 CDRs, and at least one light chain variable region, where
the CDR has the ability to bind CD3. Also described: (1) an
immunoglobulin comprising the antibody or its epitope-binding fragment
linked to a drug or prodrug; (2) a composition comprising the antibody or
epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
composition comprising the immunoglobulin, composition or the antibody
defined above, or its epitope-binding fragment, and a pharmaceutical
agent; (4) a diagnostic reagent comprising the antibody defined above,
where the antibody or antibody fragment is labelled; (5) inhibiting the
growth of a cell expressing CD3 by contacting the cell with the above
defined antibody or its epitope-binding fragment, immunoglobulin, or
(pharmaceutical) composition; (6) determining whether a biological sample
contains a myelogenous cancer cell; (7) an improved antibody or its
epitope-binding fragment that specifically binds to CD3; (8) an isolated

CC (pharmaceutical) composition; (6) determining whether a biological sample
CC contains a myelogenous cancer cell; (7) an improved antibody or its epitope
CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
CC polynucleotide encoding the antibody or its epitope-binding fragment
CC defined above; (9) an isolated polynucleotide encoding a light or heavy
CC chain of the antibody defined above or its epitope-binding fragment; (10)
CC a recombinant vector comprising the polynucleotide; (11) a host cell
CC transformed with the recombinant vector; (12) producing an antibody or
CC its epitope-binding fragment having the ability to bind CD33; and (13)
CC obtaining CD33 from a biological material. The anti-CD33 antibody has
CC cytostatic activity. The antibody or its epitope-binding fragment,
CC immunocjugate, composition can be used for treating a subject having a
CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
CC myeloid leukemia, chronic myeloid leukemia or pro-myelocytic leukaemia.
CC It can also be used for inhibiting the growth of cells expressing CD33,
CC and for in vivo imaging or as affinity purification agents. The present
CC sequence represents the mouse anti-CD33 antibody My9-6 AbMheavy chain
CC CD31, which is used in an example from the present invention.

CC of the central or peripheral nervous system, idiopathic demyelinating
 CC polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory
 CC demyelinating polyneuropathy, hepatobiliary disease, infectious or
 CC autoimmune chronic active hepatitis, primary biliary cirrhosis
 CC granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel
 CC disease, gluten-sensitive enteropathy, Whipple's disease, an autoimmune
 CC or immune-mediated skin disease, a bullous skin disease, erythema
 CC multiforme, contact dermatitis, psoriasis, an allergic disease, asthma,
 CC allergic rhinitis, atopic dermatitis, food hypersensitivity, urticaria,
 CC an immunologic disease of the lung, eosinophilic pneumonia, idiopathic
 CC pulmonary fibrosis, hypersensitivity pneumonitis, a transplantation
 CC associated disease, graft rejection and graft-versus-host-disease. The
 CC invention is also used in drug screening purposes. The present sequence
 CC is human interleukin-17A/F (IL-17A/F) Fab heavy chain variable region FR
 CC and CDR protein. The Fab heavy chain variable contains human frame work
 CC (FR) region residues and nonhuman complementarity determining regions
 CC (CDR) residues. This sequence is used in the phage library screening for
 CC antibodies that bind to interleukin-17A/F.

PT Use of sulfonylamine compounds as selective adhesion molecule inhibitors
 PT to treat demyelinating disease e.g. multiple sclerosis, by inhibiting
 PT lymphocyte infiltration and promoting remyelination to treat paralysis.

XX

PS Example 3; Page 445; 573pp; English.

XX The invention relates to sulphonylamine compounds (A) of specified
CC formulae. The compounds are used to prepare a medicament to promote
CC remyelination of nerve cells in a mammal for treatment of a demyelinating
CC disease and to inhibit lymphocyte infiltration of immune cells in the
CC spinal cord to promote remyelination of nerve cells in the spinal cord,
CC thus treating paralysis. The method of inhibiting lymphocyte infiltration
CC of immune cells in the spinal cord to promote remyelination of nerve
CC cells in the spinal cord and thus treating paralysis further comprises co
CC -administering an immunosuppressant such as adrenocorticotrophic hormone,
CC a corticosteroid (e.g. prednisone, methylprednisolone, dexamethasone
CC cortisone, cortisone, fludrocortisone, prednisolone, alpha-
CC methylprednisolone, triamcinolone or betamethasone) or an interferon
CC (e.g. interferon beta-1b or interferon beta-1a). (A) is used to prepare a
CC medicament for treating paralysis, a congenital metabolic disorder, a
CC neuropathy with abnormal myelination, drug induced demyelination,
CC radiation induced demyelination, hereditary demyelinating condition,
CC prion induced demyelinating condition, encephalitis induced demyelination
CC or spinal cord injury. The present sequence [represents a Vh 4425 fragment
CC used in the construction of reshaped human 21.6 antibody.

PT Novel antibody capable of binding or recognizing human dendritic cell-
PT specific intercellular adhesion molecule-3 grabbing non-integrin receptor
PT on cell, useful for treating cancer, and viral and bacterial infections.

XX

PS Example 5; SEQ ID NO 31; 44pp; English.

XX

CC The invention relates to an antibody (I) capable of binding human
CC Dendritic cell-specific intercellular adhesion molecule (ICAM)-3 grabbing
CC non-integrin (DC-SIGN) or recognizing a DC-SIGN receptor on a cell,
CC comprising an amino acid sequence having at least 80% homology to any one
CC of 18 fully defined 4-10 amino acid sequences (AEB21889 to AEB21906). An

CC antibody (I) capable of binding human DC-SIGN or recognizing a DC-SIGN
 CC receptor on a cell, is chosen from: an antibody (A1) capable of binding
 CC human DC-SIGN or recognizing a DC-SIGN receptor on a cell; and an
 CC antibody (A4) capable of recognizing a DC-SIGN receptor on a cell. A4
 CC effectively blocks binding of a virus to the cell, blocks infection of
 CC the cell by a virus, and/or blocks transmission of a virus from the cell
 CC to another cell, where the virus is chosen from HIV, hepatitis C virus
 CC (HCV), Ebola, severe acute respiratory syndrome (SARS), cytomegalovirus
 CC (CMV), Sindbis and Dengue; or effectively blocks binding of a bacteria or
 CC parasite to the cell, blocks infection of the cell by a bacteria or
 CC parasite, and/or blocks transmission of a bacteria or parasite from the
 CC cell to another cell, where the bacteria is chosen from *Helicobacter*
 CC *pylori*, *Klebsiella pneumoniae*, *Mycobacterium tuberculosis* and *M. bovis*,
 CC and the parasite is chosen from *Leishmania pifanoi* and *Schistosoma*
 CC *mansonii*. Also described are: a vaccine comprising A1; a composition
 CC comprising A1 and a carrier; a diagnostic agent (II) for a tumor
 CC characterized by increased DC-SIGN expression, comprising (I); a
 CC diagnostic kit comprising (II); a therapeutic agent for treating a cancer
 CC characterized by increased DC-SIGN expression, comprising A1; treating
 CC (M1) a cancer, involves administering to a subject, a cancer cell killing
 CC amount of a composition comprising A1; and treating (M2) an inflammatory
 CC disease, which involves administering to a subject, a dendritic cell
 CC killing amount of a composition comprising A1. A1 further comprises a
 CC peptide attached to it. The peptide comprises an antigen, where the
 CC antigen comprises a cancer antigen. A1 is humanized antibody or an scFv.
 CC The amino acid sequence appears in the heavy chain CDR3 of the antibody
 CC or the light chain CDR3 of the antibody. A4 capable of blocking and
 CC transmitting virus, also binds to L-SIGN. (I) is useful in interfering
 CC with the interaction of DC-SIGN expressing cells and ICAM-expressing
 CC cells, which involves administering immune-modulating amount of (I), to a
 CC subject. (I) is useful for generating an immune response, which involves
 CC administering immune-modulating amount of (I), to a subject. It is useful
 CC for delivering an antigen to DC-SIGN expressing cells, which involves
 CC attaching the antigen to (I). (I) is useful for diagnosing cancer, which
 CC involves obtaining a tissue sample from a subject suspected of having
 CC cancer, and determining the degree to which the tissue sample binds with
 CC (I), where an increase in the degree of binding compared to corresponding
 CC normal tissue indicates the presence of cancer. The determining step
 CC involves staining for the presence of DC-SIGN. (I) is useful for treating
 CC cancer or inflammatory diseases. (I) is useful for blocking binding of a
 CC virus, bacteria or parasite to the cell, blocking transmission of a
 CC by a virus, bacteria or parasite, and/or blocking transmission of a
 CC virus, bacteria or parasite from the cell to another cell, where the
 CC virus is chosen from HIV, HCV, Ebola, SARS, CMV, Sindbis and Dengue, the
 CC bacteria is chosen from *H. pylori*, *K. pneumoniae*, *M. tuberculosis* and
 CC *M. bovis*, and the parasite is chosen from *L. pifanoi* and *S. mansoni*. (I) is
 CC useful in treating autoimmune diseases (e.g., Rheumatoid arthritis,
 CC systemic lupus erythematosus, multiple sclerosis), preventing transplant
 CC rejection, preventing and treating allergies, and to prevent, inhibit or
 CC at least delay T cell activation for slowing the onset and/or the
 CC progress of a viral disease such as HIV. (I) is useful in inducing
 CC tolerance, immunotherapy, and in diagnostic and research for studying
 CC dendritic cells and/or their function and interaction, studying immune
 CC system and for detecting dendritic cells and/or C-type lectins in
 CC biological samples. The present sequence represents a human DC-SIGN
 CC antibody, heavy chain, SEQ ID NO.31.

XX
 CC The present invention describes an isolated anti-CD33 antibody or its
 CC epitope-binding fragment comprising: (a) at least one complementarity-
 CC determining region (CDR); or (b) at least heavy chain variable region
 CC comprising 3 CDRs, and at least one light chain variable region, where
 CC the CDR has the ability to bind CD33. Also described: (1) an
 CC immunoglobulin comprising the antibody or its epitope-binding fragment
 CC linked to a drug or prodrug; (2) a composition comprising the antibody or
 CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
 CC composition comprising the immunoglobulin, composition or the antibody
 CC defined above, or its epitope-binding fragment, and a pharmaceutical
 CC agent; (4) a diagnostic reagent comprising the antibody defined above,
 CC where the antibody or antibody fragment is labelled; (5) inhibiting the
 CC growth of a cell expressing CD33 by contacting the cell with the above
 CC defined antibody or its epitope-binding fragment, immunoglobulin, or
 CC (pharmaceutical) composition; (6) determining whether a biological sample
 CC contains a myelogenous cancer cell; (7) an improved antibody or its
 CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
 CC polynucleotide encoding the antibody or its epitope-binding fragment
 CC defined above; (9) an isolated polynucleotide encoding a light or heavy
 CC chain of the antibody defined above or its epitope-binding fragment; (10)
 CC a recombinant vector comprising the polynucleotide; (11) a host cell
 CC transformed with the recombinant vector; (12) producing an antibody or
 CC its epitope-binding fragment having the ability to bind CD33; and (13)
 CC obtaining CD33 from a biological material. The anti-CD33 antibody has
 CC cytostatic activity. The antibody or its epitope-binding fragment,
 CC immunoglobulin, composition can be used for treating a subject having a
 CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
 CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
 CC It can also be used for inhibiting the growth of cells expressing CD33,
 CC and for in vivo imaging or as affinity purification agents. The present
 CC sequence represents a mouse anti-CD33 antibody heavy chain homologous
 CC amino acid sequence, which is used in an example from the present
 CC invention.

PT Novel monoclonal antibody against human high-affinity Ige receptor - and
PT DNA fragment encoding the Mab, for the specific identification of human
PT Fc-epsilon RI.
XX
PS Claim 7; Page 15; 20pp; Japanese.
XX
CC Polypeptides which specifically recognise human Ige receptor (Fc- epsilon
CC -RI) have been isolated and sequenced. The new peptides are related to a
CC monoclonal antibody against Fc-epsilon-RI and are either heavy or light
CC chain molecules. The heavy chain molecules have the general formula R1-
CC CDR1H-FR2-CDR2H-FR3-CDR3H-FR4 (corresp. to AAR79153, AAR79155, AAR79157,
CC AAR79159 and AAR79161) and are encoded by AAQ96280, AAQ96282, AAQ96284,
CC AAQ96286 and AAQ96288. FR1 is a polypeptide having 29-36 amino acids
CC (aa), FR2 is a 10-16 aa polypeptide, FR3 is a 33-35 aa polypeptide and FR4
CC is a 12-14 aa polypeptide. Similarly the light chains have the general
CC formula FR5-CDR1L-FR6-CDR2L-FR7- CDR3L-FR8, (corresp. to AAR79154,
CC AAR79156, AAR79158, AAR79160 and AAR79162) and are encoded by AAQ96281,
CC AAQ96283, AAQ96285, AAQ96287 and AAQ96289. FR5 is a 23-28 aa polypeptide,
CC FR6 is a 14-16 aa polypeptide, FR7 is a 30-34 aa polypeptide and FR8 is a
CC 9-11 aa polypeptide. All the peptides are derived from mouse hybridoma
CC cells and are useful in the detection of the human Fc-epsilon-RI or for
CC the elucidation of an antigen recognising region of a monoclonal antibody
CC against human Fc-epsilon-RI. (Updated on 25-MAR-2003 to correct PA
CC field.)

XX syndrome.
PS Claim 18; SEQ ID NO 35; 83pp; English.
XX
CC The present invention describes a monoclonal antibody (1) that
CC specifically binds to alpha-v-beta-6, and inhibits the binding of alpha-v-
CC beta-6 to latency associated peptide (LAP) with an IC50 value lower than
CC that of 10D5. Also described: (1) an anti-alpha-v-beta-6 antibody
CC comprising heavy chain complementarily determining regions (CDR) 1, 2,
CC and 3, or a heavy and light chain variable domain sequence; (2) a
CC monoclonal antibody that specifically binds to alpha-v-beta-6 but does
CC not inhibit binding of alpha-v-beta-6 to LAP; (3) a composition for
CC preventing or treating a disease mediated by alpha-v-beta-6 in a mammal
CC comprising the antibody and a carrier; (4) a method for treating a
CC subject having or at risk of having a disease mediated by alpha-v-beta-6
CC by administering to the subject the composition described above, and so
CC alleviating or postponing the onset of the disease; (5) a method of
CC detecting alpha-v-beta-6 in a tissue sample by contacting the tissue
CC sample with the antibody; and (6) a cell hybridoma 6.1A8, 6.3G9, 6.8G6,
CC 6.2B1, 7.1G10, 7.7G5, or 7.1Cr, which respectively comprises American
CC Type Culture Collection (ATCC) Accession number PTA-3647, PTA-3649, PTA-
CC 3645, PTA-3646, PTA-3898, PTA-3899, or PTA-3900. (1) has cytosratic,
CC dermatological, vulnery, hepatotropic and immunosuppressive activities,
CC and can be used in vaccines. The antibodies, compositions and methods of
CC the present invention can be used for preventing or treating a disease
CC mediated by alpha-v-beta-6, e.g. fibrosis such as scleroderma, scarring,
CC liver fibrosis, kidney fibrosis or lung fibrosis; psoriasis; cancer,
CC preferably epithelial cancer, oral, skin, cervical, pharyngeal,
CC laryngeal, oesophageal, lung, breast, kidney or colorectal cancer; or
CC Alport's syndrome. The present sequence is used in the exemplification of
CC the present invention.

 PT New monoclonal antibody that specifically binds to alpha-v-beta-6, and
 PT inhibits the binding of alpha v beta 6 to latency associated peptide
 PT (LAP), useful for treating fibrosis, psoriasis, cancer, or Alport's
 PT syndrome.
 PS
 PS Claim 18; SEQ ID NO 34; 83pp; English.
 XX
 CC The present invention describes a monoclonal antibody (1) that
 CC specifically binds to alpha-v-beta-6, and inhibits the binding of alpha-v-
 CC beta-6 to latency associated peptide (LAP) with an IC50 value lower than
 CC that of 10D5. Also described: (1) an anti-alpha-v-beta-6 antibody
 CC comprising heavy chain complementarily determining regions (CDR) 1, 2,
 CC and 3, or a heavy and light chain variable domain sequence; (2) a
 CC monoclonal antibody that specifically binds to alpha-v-beta-6 but does
 CC not inhibit binding of alpha-v-beta-6 to LAP; (3) a composition for
 CC preventing or treating a disease mediated by alpha-v-beta-6 in a mammal
 CC comprising the antibody and a carrier; (4) a method for treating a
 CC subject having or at risk of having a disease mediated by alpha-v-beta-6
 CC by administering to the subject the composition described above, and so
 CC alleviating or postponing the onset of the disease; (5) a method of
 CC detecting alpha-v-beta-6 in a tissue sample by contacting the tissue
 CC sample with the antibody; and (6) a cell hybridoma 6.1A8, 6.3G9, 6.8G6,
 CC 6.2B1, 7.1G10, 7.7G5, or 7.1C7, which respectively comprises American
 CC Type Culture Collection (ATCC) Accession number PTA-3647, PTA-3649, PTA-
 CC 3645, PTA-3646, PTA-3898, PTA-3899, or PTA-3900. (1) has cyclostatic,
 CC dermatological, vulnary, hepatocytic and immunosuppressive activities,
 CC and can be used in vaccines. The antibodies, compositions and methods of
 CC the present invention can be used for preventing or treating a disease
 CC mediated by alpha-v-beta-6, e.g. fibrosis such as scleroderma, scarring,
 CC liver fibrosis, kidney fibrosis or lung fibrosis; psoriasis; cancer,
 CC preferably epithelial cancer, oral, skin, cervical, pharyngeal,
 CC laryngeal, oesophageal, lung, breast, kidney or colorectal cancer; or
 CC Alport's syndrome. The present sequence is used in the exemplification of
 CC the present invention.

 PT associated with CD33 expression, such as myelodysplastic syndrome, acute
 PT or chronic myeloid leukemia.
 PS
 PS Claim 5; SEQ ID NO 7; 124pp; English.
 XX
 CC The present invention describes an isolated anti-CD33 antibody or its
 CC epitope-binding fragment comprising: (a) at least one complementarity-
 CC determining region (CDR); or (b) at least heavy chain variable region
 CC comprising 3 CDRs, and at least one light chain variable region, where
 CC the CDR has the ability to bind CD33. Also described: (1) an
 CC immunocjugate comprising the antibody or its epitope-binding fragment
 CC linked to a drug or prodrug; (2) a composition comprising the antibody or
 CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
 CC composition comprising the immunocjugate, composition or the antibody
 CC defined above, or its epitope-binding fragment, and a pharmaceutical
 CC agent; (4) a diagnostic reagent comprising the antibody defined above,
 CC where the antibody or antibody fragment is labelled; (5) inhibiting the
 CC growth of a cell expressing CD33 by contacting the cell with the above
 CC defined antibody or its epitope-binding fragment, immunocjugate, or
 CC (pharmaceutical) composition; (6) determining whether a biological sample
 CC contains a myelogenous cancer cell; (7) an improved antibody or its
 CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
 CC polynucleotide encoding the antibody or its epitope-binding fragment
 CC defined above; (9) an isolated polynucleotide encoding a light or heavy
 CC chain of the antibody defined above or its epitope-binding fragment; (10)
 CC a recombinant vector comprising the polynucleotide; (11) a host cell
 CC transformed with the recombinant vector; (12) producing an antibody or
 CC its epitope-binding fragment having the ability to bind CD33; and (13)
 CC obtaining CD33 from a biological material. The anti-CD33 antibody has
 CC cyclostatic activity. The antibody or its epitope-binding fragment,
 CC immunocjugate, composition can be used for treating a subject having a
 CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
 CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
 CC It can also be used for inhibiting the growth of cells expressing CD33,
 CC and for in vivo imaging or as affinity purification agents. The present
 CC sequence represents the mouse anti-CD33 antibody My9-6 heavy chain
 CC variable region, which is used in an example from the present invention.

XX Claim 11; SEQ ID NO 9; 124pp; English.

XX The present invention describes an isolated anti-CD33 antibody or its
XX epitope-binding fragment comprising: (a) at least one complementarily-
XX determining region (CDR); or (b) at least one heavy chain variable region
XX comprising 3 CDRs, and at least one light chain variable region, where
XX the CDR has the ability to bind CD33. Also described: (1) an
XX immunoglobulin comprising the antibody or its epitope-binding fragment
XX linked to a drug or prodrug; (2) a composition comprising the antibody or
XX epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
XX composition comprising the immunoglobulin, composition or the antibody
XX defined above, or its epitope-binding fragment, and a pharmaceutical
XX agent; (4) a diagnostic reagent comprising the antibody defined above,
XX where the antibody or antibody fragment is labelled; (5) inhibiting the
XX growth of a cell expressing CD33 by contacting the cell with the above
XX defined antibody or its epitope-binding fragment, immunoglobulin, or
XX (pharmaceutical) composition; (6) determining whether a biological sample
XX contains a myelogenous cancer cell; (7) an improved antibody or its
XX epitope-binding fragment that specifically binds to CD33; (8) an isolated
XX polynucleotide encoding the antibody or its epitope-binding fragment
XX defined above; (9) an isolated polynucleotide encoding a light or heavy
XX chain of the antibody defined above or its epitope-binding fragment; (10)
XX a recombinant vector comprising the polynucleotide; (11) a host cell
XX transformed with the recombinant vector; (12) producing an antibody or
XX its epitope-binding fragment having the ability to bind CD33; and (13)
XX obtaining CD33 from a biological material. The anti-CD33 antibody has
XX cytostatic activity. The antibody or its epitope-binding fragment,
XX immunoglobulin, composition can be used for treating a subject having a
XX disease where CD33 is expressed, such as myelodysplastic syndrome, acute

CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
CC It can also be used for inhibiting the growth of cells expressing CD33,
CC and for in vivo imaging or as affinity purification agents. The present
CC sequence represents a humanised mouse anti-CD33 antibody My9-6 heavy
CC chain variable region, which is used in an example from the present
CC invention.

PT New antibodies against Programmed Death-1 (PD-1) for modulating immune
PT responses regulated by the PD-1 receptor or for treating autoimmune
PT diseases, inflammatory disorders, allergies, transplant rejection or
PT cancer.
XX
PS Claim 2; SEQ ID NO 10; 96pp; English.
XX
CC The specification describes an antibody which is directed against
CC Programmed Death-1 (PD-1). PD-1 is a type I transmembrane receptor. The
CC antibody specifically binds to the extracellular domain of PD-1 with an
CC affinity constant greater than 107M-1, and inhibits the binding of PD-1
CC ligands to PD-1 with an IC50 of less than 10 nM. The antibody is IgG1 or
CC IgG4 of human origin, preferably IgG1ambda or IgG1kappa. Antibodies of
CC the invention are useful for modulating immune responses regulated by the
CC PD-1 receptor or for treating autoimmune diseases, inflammatory
CC disorders, allergies, transplant rejection or cancer. Antibodies of the
CC invention may also be used to detect PD-1, which, in turn, is correlated
CC with the activation status of immune cells. The present sequence
CC represents the variable heavy chain (VH) domain of antibody PDI-33, an
CC antibody of the invention.

XX

CC This invention describes a novel use of a CD28-specific superagonistic
 CC monoclonal antibody (Mab), or its mimics, to prepare a pharmaceutical
 CC composition for induction and/or replication of regulatory T cells, in
 CC vivo and/or in vitro. The monoclonal antibody is produced by immunising a
 CC non-human mammal with CD28 or its fragments, especially the C'-D loop,
 CC conventional preparation of hybridomas, then selection from presence of
 CC the required Mab in the culture supernatant. The selected hybridomas have
 CC been deposited as DSM ACC 2531 (Mab 9D7) and 2530 (Mab 5.11A). Mimics are
 CC identified from their ability to bind to CD28, or its fragments,
 CC optionally followed by assays to test superagonistic stimulation of at
 CC least one type of T cells. The products of the invention have
 CC immunosuppressive, antiinflammatory, antidiabetic and neuroprotective
 CC activity. Mab or their mimics are administered specifically by
 CC intravenous injection alternatively, cells are treated ex vivo then
 CC returned to the patient. The Mab and their mimics are used for treatment
 CC and/or prevention of autoimmune diseases and/or inflammatory reactions,
 CC specifically Guillain-Barre syndrome and chronic demyelinating
 CC polyneuropathy, multiple sclerosis, type I diabetes and inflammatory
 CC bowel disease. This sequence represents a humanised anti-CD28 monoclonal
 CC antibody 5.11A (mab 5.11A) heavy chain variable region.

 XX Method of making pharmaceutical composition for treatment of illnesses
 PT associated with deficient costimulation ability of T-cells, employs
 PT superagonistic monoclonal antibody.
 PT
 XX Claim 6; SEQ ID NO 14; 24pp; German.
 PS
 XX This invention relates to a novel method of making a pharmaceutical
 CC composition, comprising using a superagonistic monoclonal antibody (mab).
 CC This mab is specific for a natural costimulation receptor, which is
 CC expressed on T cells, or a mimic compound. The invention may be useful

CC for the development of compounds with a cytostatic, immunostimulant or
CC antianemic activity. The method yields a pharmaceutical composition, by
CC means of which chronic lymphocyte leukemia of the B-cell type (B-CLL) can
CC be treated. At the same time the immunosystem, weakened by illness,
CC especially the T-cell associated cellular immunity, is generally
CC reinforced. The present sequence is that of an antibody region which was
CC used in the development of the novel pharmaceutical of the invention.

PT Novel antibody capable of binding or recognizing human dendritic cell-
PT specific intercellular adhesion molecule-3 grabbing non-integrin receptor
PT on cell, useful for treating cancer, and viral and bacterial infections.
XX
PS Example 5; SEQ ID NO 30; 44pp; English.
XX
CC The invention relates to an antibody (I) capable of binding human
CC Dendritic cell-specific intercellular adhesion molecule (ICAM)-3 grabbing
CC non-integrin (DC-SIGN) or recognizing a DC-SIGN receptor on a cell,
CC comprising an amino acid sequence having at least 80% homology to any one
CC of 18 fully defined 4-10 amino acid sequences (AEB21889 to AEB21906). An
CC antibody (I) capable of binding human DC-SIGN or recognizing a DC-SIGN
CC receptor on a cell, is chosen from: an antibody (A1) capable of binding
CC human DC-SIGN or recognizing a DC-SIGN receptor on a cell; and an
CC antibody (A4) capable of recognizing a DC-SIGN receptor on a cell. A4
CC effectively blocks binding of a virus to the cell, blocks infection of
CC the cell by a virus, and/or blocks transmission of a virus from the cell
CC to another cell, where the virus is chosen from HIV, hepatitis C virus
CC (HCV), Ebola, severe acute respiratory syndrome (SARS), cytomegalovirus
CC (CMV), Sindbis and Dengue; or effectively blocks binding of a bacteria or
CC parasite to the cell, blocks infection of the cell by a bacteria or
CC parasite, and/or blocks transmission of a bacteria or parasite from the
CC cell to another cell, where the bacteria is chosen from Helicobacter
CC pylori, Klebsiella pneumoniae, Mycobacterium tuberculosis and M. bovis,
CC and the parasite is chosen from Leishmania pifanoi and Schistosoma
CC mansoni. Also described are: a vaccine comprising A1; a composition
CC comprising A1 and a carrier; a diagnostic agent (II) for a tumor
CC characterized by increased DC-SIGN expression, comprising (I); a
CC diagnostic kit comprising (II); a therapeutic agent for treating a cancer
CC characterized by increased DC-SIGN expression, comprising A1; treating
CC (M1) a cancer, involves administering to a subject, a cancer cell killing
CC amount of a composition comprising A1; and treating (M2) an inflammatory
CC disease, which involves administering to a subject, a dendritic cell
CC killing amount of a composition comprising A1. A1 further comprises a

peptide attached to it. The peptide comprises an antigen, where the antigen comprises a cancer antigen. A1 is humanized antibody or an scFv. The amino acid sequence appears in the heavy chain CDR3 of the antibody or the light chain CDR3 of the antibody. A4 capable of blocking and transmitting virus, also binds to L-SIGN. (I) is useful in interfering with the interaction of DC-SIGN expressing cells and ICAM-expressing cells, which involves administering immune-modulating amount of (I), to a subject. (I) is useful for generating an immune response, which involves administering immune-modulating amount of (I), to a subject. It is useful for delivering an antigen to DC-SIGN expressing cells, which involves attaching the antigen to (I). (I) is useful for diagnosing cancer, which involves obtaining a tissue sample from a subject suspected of having cancer, and determining the degree to which the tissue sample binds with (I), where an increase in the degree of binding compared to corresponding normal tissue indicates the presence of cancer. The determining step involves staining for the presence of DC-SIGN. (I) is useful for treating cancer or inflammatory diseases. (I) is useful for blocking binding of a virus, bacteria or parasite to the cell, blocking infection of the cell by a virus, bacteria or parasite, and/or blocking transmission of a virus, bacteria or parasite from the cell to another cell, where the virus is chosen from HIV, HCV, Ebola, SARS, CMV, Sindbis and Dengue, the bacteria is chosen from H. pylori, K. pneumoniae, M. tuberculosis and M. bovis, and the parasite is chosen from L. pifanoi and S. mansoni. (I) is useful in treating autoimmune diseases (e.g., rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis), preventing transplant rejection, preventing and treating allergies, and to prevent, inhibit or at least delay T cell activation for slowing the onset and/or the progress of a viral disease such as HIV. (I) is useful in inducing tolerance, immunotherapy, and in diagnostic and research for studying dendritic cells and/or their function and interaction, studying immune system and for detecting dendritic cells and/or C-type lectins in biological samples. The present sequence represents a human DC-SIGN antibody, heavy chain, SEQ ID NO:30.

PT Novel antibody capable of binding or recognizing human dendritic cell-
 PT specific intercellular adhesion molecule-3 grabbing non-integrin receptor
 PT on cell, useful for treating cancer, and viral and bacterial infections.

PS Example 5; SEQ ID NO 32; 44pp; English.

XX The invention relates to an antibody (I) capable of binding human
 CC Dendritic cell-Specific intercellular adhesion molecule (ICAM)-3 grabbing
 CC non-integrin (DC-SIGN) or recognizing a DC-SIGN receptor on a cell.
 CC comprising an amino acid sequence having at least 80% homology to any one
 CC of 18 fully defined 4-10 amino acid sequences (AEB21889 to AEB21906). An
 CC antibody (I) capable of binding human DC-SIGN or recognizing a DC-SIGN
 CC receptor on a cell, is chosen from: an antibody (A1) capable of binding
 CC human DC-SIGN or recognizing a DC-SIGN receptor on a cell; and an
 CC antibody (A4) capable of recognizing a DC-SIGN receptor on a cell. A4
 CC effectively blocks binding of a virus to the cell, blocks infection of
 CC the cell by a virus, and/or blocks transmission of a virus from the cell
 CC to another cell, where the virus is chosen from HIV, hepatitis C virus
 CC (HCV), Ebola, severe acute respiratory syndrome (SARS), cytomegalovirus
 CC (CMV), Sindbis and Dengue; or effectively blocks binding of a bacteria or
 CC parasite to the cell, blocks infection of the cell by a bacteria or
 CC parasite, and/or blocks transmission of a bacteria or parasite from the
 CC cell to another cell, where the bacteria is chosen from Helicobacter
 CC pylori, Klebsiella pneumoniae, Mycobacterium tuberculosis and M. bovis,
 CC and the parasite is chosen from Leishmania pifanoi and Schistosoma
 CC mansoni. Also described are: a vaccine comprising A1; a composition
 CC comprising A1 and a carrier; a diagnostic agent (II) for a tumor
 CC characterized by increased DC-SIGN expression, comprising (I); a
 CC diagnostic kit comprising (II); a therapeutic agent for treating a cancer
 CC characterized by increased DC-SIGN expression, comprising A1; treating
 CC (M1) a cancer, involves administering to a subject, a cancer cell killing
 CC amount of a composition comprising A1; and treating (M2) an inflammatory
 CC disease, which involves administering to a subject, a dendritic cell
 CC killing amount of a composition comprising A1. A1 further comprises a
 CC peptide attached to it. The peptide comprises an antigen, where the
 CC antigen comprises a cancer antigen. A1 is humanized antibody or an scFv.
 CC The amino acid sequence appears in the heavy chain CDR3 of the antibody
 CC or the light chain CDR3 of the antibody. A4 capable of blocking and
 CC transmitting virus, also binds to L-SIGN. (I) is useful in interfering
 CC with the interaction of DC-SIGN expressing cells and ICAM-expressing
 CC cells, which involves administering immune-modulating amount of (I), to a
 CC subject. (I) is useful for generating an immune response, which involves
 CC administering immune-modulating amount of (I), to a subject. It is useful
 CC for delivering an antigen to DC-SIGN expressing cells, which involves
 CC attaching the antigen to (I). (I) is useful for diagnosing cancer, which
 CC involves obtaining a tissue sample from a subject suspected of having
 CC cancer, and determining the degree to which the tissue sample binds with
 CC (I), where an increase in the degree of binding compared to corresponding
 CC normal tissue indicates the presence of cancer. The determining step
 CC involves staining for the presence of DC-SIGN. (I) is useful for treating
 CC cancer or inflammatory diseases. (I) is useful for blocking binding of a
 CC virus, bacteria or parasite to the cell, blocking infection of the cell
 CC by a virus, bacteria or parasite, and/or blocking transmission of a
 CC virus, bacteria or parasite from the cell to another cell, where the
 CC virus is chosen from HIV, HCV, Ebola, SARS, CMV, Sindbis and Dengue, the
 CC bacteria is chosen from H. pylori, K. pneumoniae, M. tuberculosis and
 CC M. bovis, and the parasite is chosen from L. pifanoi and S. mansoni. (I) is
 CC useful in treating autoimmune diseases (e.g., rheumatoid arthritis,
 CC systemic lupus erythematosus, multiple sclerosis), preventing transplant
 CC rejection, preventing and treating allergies, and to prevent, inhibit or
 CC at least delay T cell activation for slowing the onset and/or the
 CC progress of a viral disease such as HIV. (I) is useful in inducing
 CC tolerance, immunotherapy, and in diagnostic and research for studying
 CC dendritic cells and/or their function and interaction, studying immune
 CC system and for detecting dendritic cells and/or C-type lectins in
 CC biological samples. The present sequence represents a human DC-SIGN
 CC antibody, heavy chain, SEQ ID NO:32.

PT New protein comprising an immunoglobulin heavy chain variable (VH) domain
PT and an immunoglobulin light chain variable (VL) domain, useful for
PT preparing a composition for treating or preventing a cancerous disorder.
XX
PS Disclosure; Fig 10B; 224pp; English.

XX The present invention describes a protein comprising an immunoglobulin
CC (Ig) heavy chain variable (VH) domain and an Ig light chain variable (VL)
CC domain. The protein binds a complex comprising a major histocompatibility
CC complex (MHC) and a peptide, does not substantially bind the MHC in the
CC absence of the bound peptide, and does not substantially bind the peptide
CC in the absence of the MHC. The peptide is a peptide fragment of gp100,
CC MUC1, TAX or hTERT. Also described: (1) a pharmaceutical composition
CC comprising the novel protein and a carrier; (2) a cytotoxic T cell
CC comprising one or more nucleic acids for expressing the Ig that binds a
CC complex having an MHC and a peptide, does not substantially bind the MHC
CC in the absence of the bound peptide, and does not substantially bind the
CC peptide in the absence of the MHC; (3) an isolated nucleic acid
CC comprising a first segment that encodes the Ig variable domain; (4) a
CC host cell comprising heterologous nucleic acid sequences that encodes the
CC novel protein; (5) a transgenic animal whose genome includes heterologous
CC nucleic acid sequences that encode the protein; (6) identifying the
CC protein that specifically binds the MHC-peptide complex; (7) expressing
CC an antigen-binding protein; (8) ablating or killing a target cell that
CC displays a peptide on a surface MHC molecule; (9) treating or preventing
CC a cancerous disorder in a subject; and (10) detecting an MHC-peptide
CC complex in a sample. A protein of the invention has cytostatic activity,

CC and can be used in gene therapy. The protein is useful for preparing a
CC composition for treating or preventing a cancerous disorder. The present
CC sequence represents the heavy chain of an antibody which binds to an MHC-
CC peptide complex where the peptide component in as peptide fragment of
CC gp100.

XX PT Antibodies against B lymphocyte Stimulating polypeptides, useful for the
PT diagnosis and treatment of cancers and immune disorders.

XX PS Claim 1; Page 2889-2890; 3148pp; English.

XX CC This invention describes novel antibodies that immunospecifically bind to
CC B lymphocyte Stimulator (Blys) polypeptides. Blys is a member of the
CC tumour necrosis factor (TNF) super family and induces B cell
CC proliferation and differentiation. The antibodies of the invention have
CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory,
CC antineumatic and antiAIDS activity and can be used in vaccines to
CC inhibit the expression and activity of Blys. The antibodies bind to Blys
CC and so may be used to detect and quantitate the presence of Blys in
CC biological samples and may be used in this way to diagnose disease
CC associated with aberrant expression of Blys. They may also be
CC administered to treat diseases associated with aberrant Blys expression
CC and activity such as cancer, immune, and autoimmune disorders and
CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis,
CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and
CC acquired immunodeficiency syndrome (AIDS)). ABP4390-ABP47228 represent
CC the antibodies and fragments of the antibodies described in the method of
CC the invention

 PT Novel antibody that immunospecifically binds to a B lymphocyte stimulator
 PT (Blys), useful for detecting and treating diseases or disorders e.g.
 PT rheumatoid arthritis, asthma and leukemia.
 XX
 PS Example 1; SEQ ID NO 2089; 394pp; English.
 XX
 CC This invention relates to novel antibodies that immunospecifically bind
 CC to B lymphocyte stimulator (Blys). The Blys gene has been mapped to
 CC chromosome 13q34 and encodes a protein that is a member of the tumour
 CC necrosis factor superfamily and induces both in vivo and in vitro B cell
 CC proliferation and differentiation. Specifically, it refers to single
 CC chain antibody molecules (scFvs) derived, preferably, from the variable
 CC heavy CDR3 region that immunospecifically bind to a polypeptide, or
 CC fragment thereof, of either human, murine, rat or monkey Blys. The
 CC present invention refers to the use of such antibodies in various methods
 CC for the detection, diagnosis and prognosis of diseases related to the
 CC aberrant expression or inappropriate function of Blys or its receptor. As
 CC such, these compositions are useful for identifying immune disorders
 CC including myasthenia gravis and multiple sclerosis, inflammatory
 CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such
 CC as AIDS and proliferative disorders including leukaemia, carcinoma and
 CC lymphoma. Accordingly, they can be described as exhibiting various
 CC activities such as antirheumatic, antiallergic, neuroprotective,
 CC antiinflammatory, antiasthmatic, antiallergic and cytostatic. This
 CC polypeptide sequence is a single chain antibody that binds Blys of the
 CC invention. NOTE: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "Cell surface localization and processing of the ComG proteins,"
RT required for DNA binding during transformation of Bacillus subtilis."
RL Mol. Microbiol. 29:905-913(1998).
CC CC -1- FUNCTION: Required for transformation and DNA binding.
CC CC -1- SUBUNIT: Homodimer; disulfide-linked. A minor fraction of comG is
CC CC found as a disulfide-bonded homodimer.
CC CC -1- SUBCELLULAR LOCATION: About half of pre-comG is present as a
CC CC peripheral membrane protein and the other half as an integral
CC CC protein. Upon (partial) processing comG is translocated to a
CC CC position outside the membrane.
CC CC -1- PTM: Partial processing of comG in competent cells requires comC.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed.
and is derived by analysis of the total score distribution.

XX 05-NOV-2003; 2003WO-US032737.
XX 07-NOV-2002; 2002US-0424332P.
XX (IMMU-) IMMUNOGEN INC.
XX Hoffee MG, Tavares D, Lutz RJ;
XX WPI; 2004-411619/38.
XX New antibodies that bind to CD33, useful for treating a disease
XX associated with CD33 expression, such as myelodysplastic syndrome, acute
XX or chronic myeloid leukemia.
XX Example 3; SEQ ID NO 57; 124pp; English.
XX The present invention describes an isolated anti-CD33 antibody or its
XX epitope-binding fragment comprising: (a) at least one complementarity-
XX determining region (CDR); or (b) at least heavy chain variable region

comprising 3 CDRs, and at least one light chain variable region, where
the CDR has the ability to bind CD33. Also described: (1) an
immunoglobulin comprising the antibody or its epitope-binding fragment
linked to a drug or prodrug; (2) a composition comprising the antibody or
epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
composition comprising the immunoglobulin, composition or the antibody
defined above, or its epitope-binding fragment, and a pharmaceutical
agent; (4) a diagnostic reagent comprising the antibody defined above,
where the antibody or antibody fragment is labelled; (5) inhibiting the
growth of a cell expressing CD33 by contacting the cell with the above
defined antibody or its epitope-binding fragment, immunoglobulin, or
(pharmaceutical) composition; (6) determining whether a biological sample
contains a myelogenous cancer cell; (7) an improved antibody or its
epitope-binding fragment that specifically binds to CD33; (8) an isolated
polynucleotide encoding the antibody or its epitope-binding fragment
defined above; (9) an isolated polynucleotide encoding a light or heavy
chain of the antibody defined above or its epitope-binding fragment; (10)
a recombinant vector comprising the polynucleotide; (11) a host cell
transformed with the recombinant vector; (12) producing an antibody or
its epitope-binding fragment having the ability to bind CD33; and (13)
obtaining CD33 from a biological material. The anti-CD33 antibody has
cytostatic activity. The antibody or its epitope-binding fragment,
immunoglobulin, composition can be used for treating a subject having a
disease where CD33 is expressed, such as myelodysplastic syndrome, acute
myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
It can also be used for inhibiting the growth of cells expressing CD33,
and for in vivo imaging or as affinity purification agents. The present
sequence represents the mouse anti-CD33 antibody My9-6 heavy chain CDR2,
which is used in an example from the present invention.

XX Claim 11; SEQ ID NO 9; 124dp; English.

XX The present invention describes an isolated anti-CD33 antibody or its
 CC epitope-binding fragment comprising: (a) at least one complementarity-
 CC determining region (CDR); or (b) at least heavy chain variable region
 CC comprising 3 CDRs, and at least one light chain variable region, where
 CC the CDR has the ability to bind CD33. Also described: (1) an
 CC immunconjugate comprising the antibody or its epitope-binding fragment
 CC linked to a drug or produg; (2) a composition comprising the antibody or
 CC epitope-binding fragment and a drug or produg; (3) a pharmaceutical
 CC composition comprising the immunconjugate, composition or the antibody
 CC defined above, or its epitope-binding fragment, and a pharmaceutical
 CC agent; (4) a diagnostic reagent comprising the antibody defined above,
 CC where the antibody or antibody fragment is labelled; (5) inhibiting the
 CC growth of a cell expressing CD33 by contacting the cell with the above
 CC defined antibody or its epitope-binding fragment, immunconjugate, or
 CC (pharmaceutical) composition; (6) determining whether a biological sample
 CC contains a myelogenous cancer cell; (7) an improved antibody or its
 CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
 CC polynucleotide encoding the antibody or its epitope-binding fragment
 CC defined above; (9) an isolated polynucleotide encoding a light or heavy
 CC chain of the antibody defined above or its epitope-binding fragment; (10)
 CC a recombinant vector comprising the polynucleotide; (11) a host cell
 CC transformed with the recombinant vector; (12) producing an antibody or
 CC its epitope-binding fragment having the ability to bind CD33; and (13)
 CC obtaining CD33 from a biological material. The anti-CD33 antibody has
 CC cytostatic activity. The antibody or its epitope-binding fragment,
 CC immunconjugate, composition can be used for treating a subject having a
 CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
 CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
 CC It can also be used for inhibiting the growth of cells expressing CD33,
 CC and for in vivo imaging or as affinity purification agents. The present
 CC sequence represents a humanised mouse anti-CD33 antibody My9-6 heavy
 CC chain variable region, which is used in an example from the present
 CC invention.

 DR Use of CD25 binding molecules in the treatment of rheumatoid arthritis
 XX and inflammatory or hyperproliferative skin diseases.
 PT
 XX Claim 1; Page 11; 14pp; English.
 PS
 XX The present invention describes CD25 binding molecules, which are used to
 CC treat rheumatoid arthritis and inflammatory or hyperproliferative skin
 CC diseases. The CD25 binding molecule comprises at least one antigen
 CC binding site comprising at least one domain which comprises in sequence,
 CC the hypervariable regions CDR1 (having the sequence RYMMH), CDR2 (having
 CC the sequence AIRPGNSDTSYNOKFEG) and CDR3 (having the sequence DYGYDFP),
 CC or their direct equivalents. The CD25 binding molecules are used in the
 CC treatment of rheumatoid arthritis and inflammatory or hyperproliferative
 CC skin diseases, such as psoriasis, atopic dermatitis, contact dermatitis
 CC and further eczematous dermatitis, seborrheic dermatitis, lichen
 CC planus, Pemphigus, bullous Pemphigoid, Epidermolysis bullosa, urticaria,
 CC angiodemas, vasculitides, erythemas, cutaneous eosinophilias, lupus
 CC erythematosus and acne. A more preferred CD25 binding molecule for use in
 CC accordance with the present invention is selected from a chimeric anti-
 CC CD25 antibody which comprises at least: (1) one immunoglobulin heavy
 CC chain, or fragment, which comprises (i) a variable domain comprising in
 CC sequence the hypervariable regions CDR1, CDR2 and CDR3 (as above) and
 CC (ii) the constant part, or fragment, of a human heavy chain; and (2) one
 CC immunoglobulin light chain, or fragment, which comprises (i) a variable
 CC domain comprising in sequence the hypervariable regions CDR1', CDR2' and
 CC CDR3' (SASSISMQ, DTSKLAS and HORSSTY, respectively) and (ii) the
 CC constant part, or fragment, of a human light chain

 XX Preventing or treating transplant rejection in a recipient comprises
 PT administering a monoclonal antibody specific for interleukin-2 receptor
 PT beyond the very early phase following transplantation.
 PT
 XX Disclosure; Page 2; 17pp; English.
 PS
 XX The present sequence is a human complementarily determining region (CDR).
 CC This sequence was used to generate a humanised antibody specific for the
 CC alpha subunit of interleukin-2 receptor (IL-2Ralpha). The humanised IL-
 CC 2Ralpha antibody would be useful for preventing or treating transplant
 CC rejection in a recipient of organ, tissue or modified or unmodified cell
 CC transplant. The use of a monoclonal antibody specific for IL-2R decreases
 CC recipient rejection in an immunosuppression-intolerant or non-compliant
 CC recipient compared with available therapies. Also, undesirable side
 CC effects associated with current treatments e.g. renal dysfunction,
 CC hirsutism, gingival hyperplasia and hypertension are avoided

 CC sequence, the hypervariable regions CDR1, CDR2 and CDR3 (complementarily
 CC determining region), for use in prevention or treatment of diseases such
 CC as autoimmune hepatitis, asthma, eczema, vasculitis, temporal arthritis,
 CC leukemia, glomerulonephritis, multiple sclerosis and Crohn's disease in a
 CC steroid-resistant patient. (I) is useful in the manufacture of a
 CC medicament for use in the prevention and treatment of autoimmune
 CC hepatitis, asthma, eczema, vasculitis, temporal arthritis, systemic lupus
 CC erythematosus, leukemia, glomerulonephritis, multiple sclerosis,
 CC ulcerative colitis, sarcoid and Crohn's disease in a steroid-sensitive or
 CC steroid-resistant patient. (I) is coadministered with a further drug
 CC substance. The use of CD25 binding molecules make the steroid-sensitive
 CC patients respond quicker and allow a lower dose of steroids to be used,
 CC thus significantly reducing the side effects of steroid treatments. The
 CC present sequence represents a hypervariable CDR2 fragment of a chimeric
 CC anti-CD25 antibody, a CD25 binding molecule

XX
XX New agents for inducing apoptosis in cells - which are able to modulate a
XX biochemical pathway in which prode. of opioid peptide precursor genes
XX participate.
XX
XX Claim 6; Fig 5; 64pp; English.
XX
XX AAR91363-R91366, AAR91368-R19373 and AAR95283-R95286 represent partial
XX sequences of anti-proenkephalin (anti-PE) antibodies, which are used in
XX an agent for inducing apoptosis in cells. This sequence represents the
XX anti-PE antibody PE-1, and recognises residues 187-192 of the PE sequence
XX (see AAR91362). The agents preferably neutralise PE or its proteolytic
XX derivatives, increase the level of, activate or mimic nuclear PE, and act
XX as an antagonist to receptors related or identical to the delta and kappa
XX opioid receptors. The agent is preferably a neutralising monoclonal
XX antibody (such as this sequence), or a fragment or allelic form of one of
XX these antibodies. A cytoplasmic anchor, or a nuclear localisation signal
XX may also be included in the agent. The agent is able to modulate a
XX biochemical pathway in a cell in which products of opioid peptide
XX precursor (OPP) genes participate in order to induce the cell to
XX apoptose. The agents can be used for the treatment of cancer or for
XX inducing apoptosis in lens cells following a cataract operation. These
XX agents promote apoptosis of proliferating cells with less, or no, effect
XX on normal mature cell types. The agents may be administered in
XX combination with a genotoxic or cell cycle arrest agent. Alternatively,
XX the agent may be complexed with a chemotherapeutic, irradiation or cell
XX cycle arrest (synchronisation) agent

XX
XX New antibodies that bind to CD33, useful for treating a disease
XX associated with CD33 expression, such as myelodysplastic syndrome, acute
XX or chronic myeloid leukemia.
XX
XX Example 3; SEQ ID NO 80; 124pp; English.
XX
XX The present invention describes an isolated anti-CD33 antibody or its
XX epitope-binding fragment comprising: (a) at least one complementarity-
XX determining region (CDR); or (b) at least heavy chain variable region
XX comprising 3 CDRs, and at least one light chain variable region, where
XX the CDR has the ability to bind CD33. Also described: (1) an
XX immunoglobulin comprising the antibody or its epitope-binding fragment
XX linked to a drug or prodrug; (2) a composition comprising the antibody or
XX epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
XX composition comprising the immunoglobulin, composition or the antibody
XX defined above, or its epitope-binding fragment, and a pharmaceutical
XX agent; (4) a diagnostic reagent comprising the antibody defined above,
XX where the antibody or antibody fragment is labelled; (5) inhibiting the
XX growth of a cell expressing CD33 by contacting the cell with the above
XX defined antibody or its epitope-binding fragment, immunoglobulin, or
XX (pharmaceutical) composition; (6) determining whether a biological sample
XX contains a myelogenous cancer cell; (7) an improved antibody or its
XX epitope-binding fragment that specifically binds to CD33; (8) an isolated
XX polynucleotide encoding the antibody or its epitope-binding fragment
XX defined above; (9) an isolated polynucleotide encoding a light or heavy
XX chain of the antibody defined above or its epitope-binding fragment; (10)
XX a recombinant vector comprising the polynucleotide; (11) a host cell
XX transformed with the recombinant vector; (12) producing an antibody or
XX its epitope-binding fragment having the ability to bind CD33; and (13)
XX obtaining CD33 from a biological material. The anti-CD33 antibody has
XX cytostatic activity. The antibody or its epitope-binding fragment,
XX immunoglobulin, composition can be used for treating a subject having a
XX disease where CD33 is expressed, such as myelodysplastic syndrome, acute
XX myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
XX It can also be used for inhibiting the growth of cells expressing CD33,
XX and for in vivo imaging or as affinity purification agents. The present
XX sequence represents a mouse anti-CD33 antibody heavy chain homologous
XX amino acid sequence, which is used in an example from the present
XX invention.

 XX
 CC This sequence is the heavy chain variable region of the murine CD25-
 CC binding antibody, RFT5-1gG2a. The three CDR regions (see Features Table)
 CC are characteristic of the CD25-binding mol. covered by the invention. A
 CC mouse/human chimeric antibody is expressed using the V(H) domain-encoding
 CC sequence (along with the promoter and enhancer) fused into the EcoRI
 CC restriction site of pSV2 neo- human gamma, constant part. The chimeric
 CC antibody heavy chain thus comprises the human gamma-1-type heavy chain
 CC and RFT5-1gG2a variable region. A similarly humanised murine CD25-Ab
 CC light chain can be prepared (see AAQ13834) to give a chimeric antibody.
 CC CD25-binding molecules inhibit T-cell proliferation and show good
 CC immunomodulatory activity. They are pref. used with CD7 Ab. (Updated on
 CC 25-MAR-2003 to correct PA field.)

 PT New modulator capable of negatively modulating a CA 125 tumor antigen in
 PT a mammalian cell, useful for preparing a composition for preventing or
 PT treating CA 125 tumor antigen-associated disease in a mammal.
 XX
 PS Disclosure; Fig 29C; 90pp; English.
 XX
 CC The present invention describes a modulator capable of negatively
 CC modulating a CA 125 tumour antigen in a mammalian cell. Also described:
 CC (1) a recombinant nucleic acid comprising at least one sequence selected
 CC from the group consisting of ADC79233, ADC79234, ADC79235, ADC79236,
 CC ADC79237 and ADC79238; (2) a vector comprising the recombinant nucleic
 CC acid; (3) a host cell; (4) a pharmaceutical composition; (5) preventing
 CC or treating CA 125 tumour antigen-associated disease in a mammal; and (6)
 CC negatively modulating a CA 125 tumour antigen in a mammalian cell. A
 CC modulator capable of negatively modulating a CA 125 tumour antigen has
 CC cytostatic activity, and can be used in gene therapy. The modulator,
 CC recombinant nucleic acid, vector or host cell can be used for preparing a
 CC composition for preventing or treating CA 125 tumour antigen-associated
 CC disease in a mammal. The present sequence is used in the exemplification
 CC of the present invention.

 PT New fusion protein comprising an anti-fungal protein or peptide and an
 PT antibody fragment, useful in agriculture and horticulture for producing
 PT Ascomyceta-resistant transgenic plants, plant cells or plant tissues.
 XX
 XX Example 13; SEQ ID NO 36; 47pp; English.
 XX

CC This invention relates to a novel fusion protein comprising an anti-fungal protein or peptide (AFP) and an antibody fragment (scFv).
CC Specifically, it refers to AFPs recognizing an epitope of an Ascomyceta and a cellular targeting sequence, which can be used to generate disease resistant transgenic plants that are protected against fungal infection.
CC Accordingly, a method is described for antibody based resistance in plants such that the undesirable and expensive chemical controls often used in agriculture are not required. The present invention provides antibodies, recombinant antibodies and fragments thereof, as well as fusion proteins that can be used as pathogen-specific antibodies targeted to different plant cell compartments. As such, these fungicidal agents confer a broad spectrum of disease resistance in both economically important crops and ornamental plants. This polypeptide is an antibody used in an exemplification of the invention.

PT New humanized anti-CD20 monoclonal antibody (Mab) that retains
 PT substantially the B-cell and B-cell lymphoma and leukemia cell targeting
 PT of the murine anti-CD20 Mab, useful for treating B-cell lymphoma,
 PT leukemia or an autoimmune diseases.
 XX

PS Claim 7; Page 68; 106pp; English.
 XX

CC The invention comprises a humanised anti-CD20 (hCD20) monoclonal antibody
 CC (Mab) or its antigen-binding fragment containing the complementarity
 CC determining regions (CDRs) of at least one murine anti-CD20 Mab variable
 CC region and the framework regions (FR) of at least one human IV1AB
 CC variable region. The antibodies of the invention are useful for
 CC diagnosing or preventing B-cell lymphoma, leukaemia or an autoimmune
 CC disease (e.g. thrombocytopenia, lupus or rheumatoid arthritis). The
 CC present amino acid sequence represents a humanised antibody heavy chain
 CC variable region of the invention.

PS Claim 2; SEQ ID NO 11; 108pp; English.
 XX

CC The present invention describes a humanised antibody (I) that binds human
 CC CD20 or its antigen-binding fragment, which depletes primate B cells in
 CC vivo, and comprises in the H chain Variable region (VH) at least a CDR3
 CC sequence consisting of 9 amino acids (SEQ ID NO:12, ADP79605) from an
 CC anti-human CD20 antibody and substantially the human consensus framework
 CC (FR) residues of human heavy chain subgroup III (VHIII). (I) has
 CC cyostatic, antirheumatic, antiarthritic, immunosuppressive,
 CC antiinflammatory, haemostatic, neuroprotective, antipsoriatic, muscular,
 CC antidiabetic, antianemic, nephrotropic, hepatotropic and CNS
 CC activities, and can be used as a CD20 inhibitor. The humanised CD20
 CC binding antibody (I) can be used for treating a CD20 positive cancer
 CC (e.g. B cell lymphoma, leukaemia, non-Hodgkin's lymphoma, lymphocyte
 CC predominant Hodgkin's disease, chronic lymphocytic leukaemia or SLL), and
 CC autoimmune disease (e.g. rheumatoid arthritis, juvenile rheumatoid
 CC arthritis, systemic lupus erythematosus, Wegener's disease, inflammatory
 CC bowel disease, idiopathic thrombocytopenic purpura, thrombotic
 CC thrombocytopenic purpura, autoimmune thrombocytopenia, multiple
 CC sclerosis, psoriasis, Iga nephropathy, Igm polyneuropathies, myasthenia
 CC gravis, vasculitis, diabetes mellitus, Reynaud's syndrome, Sjogren's
 CC syndrome, glomerulonephritis, Dermatomyositis, Wegner's granulomatosis,
 CC ANCA (included under vasculitis), Aplastic anaemia, Autoimmune haemolytic
 CC anaemia, factor VIII deficiency, haemophilia A, autoimmune neutropenia,
 CC Castleman's syndrome, Goodpasture's syndrome, solid organ transplant
 CC rejection, graft versus host disease, Igm mediated, Hashimoto's
 CC thyroiditis, autoimmune hepatitis, lymphoid interstitial pneumonitis,
 CC bronchiolitis obliterans (non-transplant) vs NSIP, Guillain-Barre
 CC Syndrome, large vessel vasculitis, giant cell (Takayasu's) arteritis,
 CC medium vessel vasculitis, Kawasaki's Disease, or polyarteritis nodosa).
 CC The present sequence represents the 2H7 anti-CD20 murine monoclonal
 CC antibody and humanised 2H7.v16 variant heavy chain variable (VH) domain
 CC CDR2 amino acid sequence, which is used in an example from the present
 CC invention.

XX      PT      Novel monoclonal antibody (mAb) binding to CD20 or mouse CD20, in which
XX      PT      density of binding of mAb to B cells is two-fold higher than density of
XX      PT      binding of mAb to B cells, useful for depleting B cells, and treating
XX      PS      B cell disorder.
XX      PS      Example 1; SEQ ID NO 65; 205pp; English.
XX      CC      The invention relates to a monoclonal antibody (mAb) or its antigen-
XX      CC      binding fragment that specifically binds to human CD20 or mouse CD20,
XX      CC      where the density of binding of mAb or antigen-binding fragment to B
XX      CC      cells is at least two-fold higher than the density of binding of mAb 1F5
XX      CC      to B cells. Also included are a pharmaceutical composition comprising mAb
XX      CC      in a carrier, a pharmaceutical composition (comprising mAb or its antigen
XX      CC      binding fragment which specifically binds to the same antigenic
XX      CC      determinant as a monoclonal antibody chosen from HB20-1, HB20-3, HB20-4
XX      CC      and HB20-25 in a carrier), a cell line producing the mAb, producing the
XX      CC      mAb, an antigen binding fragment of the mAb, an isolated nucleic acid
XX      CC      encoding a heavy chain or light chain comprising a variable region
XX      CC      (comprising CDR3, or CDR1, CDR2 and CDR3 regions from mAb chosen from
XX      CC      HB20-1, HB20-3, HB20-4, HB20-5, HB20-25, HB20-11, HB20-1, HB20-2, HB20-7,
XX      CC      HB20-8, HB20-10, HB20-14, HB20-16 and HB20-18), a vector
XX      CC      comprising the nucleic acid, a cell comprising the nucleic acid or
XX      CC      vector, and depleting B cells in a mammalian subject (involving
XX      CC      administering the mAb and anti-CD22 or anti-CD19 antibody). The anti-CD20
XX      CC      mAb, compositions and cells are useful for depleting B cells in a
XX      CC      mammalian subject and for treating a B cell disorder. The B cell disorder
XX      CC      is B cell malignancy or autoimmune disease e.g. rheumatoid arthritis,
XX      CC      idiopathic thrombocytopenic purpura or hemolytic anemia. The mammalian
XX      CC      subject is resistant to anti-CD20 mAb therapy or resistant to therapy
XX      CC      with mAb C288. The mammalian subject has been or is currently treated
XX      CC      with chemotherapy. The mammalian subject had a relapse in a B cell
XX      CC      disorder. The mammalian subject is immunocompromised. The present
XX      CC      sequence represents a CDR (complementarity determining region) from anti-
XX      CC      CD20 monoclonal antibody.

 XX PT New polypeptide or Blyss antagonist, for treating an immune-related
 PT condition (e.g. rheumatoid arthritis, multiple sclerosis or systemic
 PT lupus erythematosus) or cancer (e.g. leukemia or lymphoma).
 XX PS Disclosure; SEQ ID NO 51; 226pp; English.
 XX CC The invention relates to a polypeptide comprising sequences of formula I,
 CC II or III, (detailed in the claims) which are antagonists of Blyss (B cell
 CC stimulator). Also included are a nucleic acid molecule encoding the
 CC polypeptide, a vector comprising the nucleic acid molecule, a host cell
 CC comprising the nucleic acid molecule, a method for producing a
 CC polypeptide, a composition comprising the polypeptide optionally further
 CC comprising a physiological carrier, a method for detecting an inhibitor
 CC of Blyss binding to BR3 (Blyss receptor 3) in vitro, a method for
 CC inhibiting Blyss binding to BR3 in a mammal, a method for inhibiting Blyss
 CC signaling in a mammal and a method for treating an immune-related
 CC condition or cancer in a mammal. The sequence of Formula I, II or III is
 CC a sequence fused or conjugated to an immunoadhesion protein or to an
 CC antibody, where the antibody is a F(ab) antibody, F(ab')₂ antibody, a
 CC scv antibody, a humanized antibody or multispecific antibody, e.g.
 CC antibodies directed against CD20. The polypeptide is conjugated to an
 CC agent, e.g. a growth inhibitory agent, a cytotoxic agent, a detection
 CC agent, an agent that improves the bioavailability of the polypeptide and
 CC an agent that improves the half-life of the polypeptide, where the
 CC cytotoxic agent is a toxin, an antibiotic or a radioactive isotope. The
 CC polypeptide, composition and methods are useful for treating an immune-
 CC related condition (many examples given in the specification), e.g.
 CC rheumatoid arthritis, multiple sclerosis or systemic lupus erythematosus
 CC or for treating cancer (many examples given in the specification), e.g.
 CC leukemia, lymphoma or myeloma. The present sequence represents the CDR
 CC (complementarity determining region) of the light or heavy chain variable
 CC region of a mouse antibody directed against human CD20.

New CD20-binding polypeptide (chimeric antibody), useful for treating autoimmune diseases and proliferative disorders such as leukemia, lymphomas and rheumatoid arthritis.

Claim 2; Fig 1; 64pp; English.

The invention relates to a polypeptide composition having the ability to bind to CD20 antigen. The CD20-binding polypeptide composition is in the form of a chimeric antibody and further including a human heavy chain constant region and a human light chain constant region, where the human heavy chain constant region is an Igg constant region, specifically an Igg1 constant region, and where the human light chain constant region is a human kappa light chain constant region. The polypeptide is fused to a cytokine, i.e. interleukin-2 (IL2). The C-terminus of the polypeptide is fused to the N-terminus of the cytokine. The polypeptides are in the form of a whole antibody, a Fab antibody fragment, a single-chain Fv antibody fragment, or a minibody. The polypeptide composition or a pharmaceutical composition is useful for manufacturing a medicament for the treatment of an autoimmune disease. The composition and method are useful for treating

proliferative disorders such as leukemia, lymphomas, rheumatoid arthritis, and other autoimmune diseases. The present sequence represents the VHD antibody heavy chain variable region used in the CD20-binding polypeptide composition of the invention.

New CD20-binding polypeptide (chimeric antibody), useful for treating autoimmune diseases and proliferative disorders such as leukemia, lymphomas and rheumatoid arthritis.

Claim 1; Fig 1; 64pp; English.

The invention relates to a polypeptide composition having the ability to bind to CD20 antigen. The CD20-binding polypeptide composition is in the form of a chimeric antibody and further including a human heavy chain constant region and a human light chain constant region, where the human heavy chain constant region is an Igg constant region, specifically an Igg1 constant region, and where the human light chain constant region is a human kappa light chain constant region. The polypeptide is fused to a cytokine, i.e. interleukin-2 (IL2). The C-terminus of the polypeptide is fused to the N-terminus of the cytokine. The polypeptides are in the form of a whole antibody, a Fab antibody fragment, a single-chain Fv antibody fragment, or a minibody. The polypeptide composition or a pharmaceutical composition is useful for manufacturing a medicament for the treatment of an autoimmune disease. The composition and method are useful for treating proliferative disorders such as leukemia, lymphomas, rheumatoid arthritis, and other autoimmune diseases. The present sequence represents the 2B8 antibody heavy chain variable region used in the CD20-binding polypeptide composition of the invention.

CC bind to CD20 antigen. The CD20-binding polypeptide composition is in the
CC form of a chimeric antibody and further including a human heavy chain
CC constant region and a human light chain constant region, where the human
CC heavy chain constant region is an Igg constant region, specifically an
CC 1Gg1 constant region, and where the human light chain constant region is
CC a human kappa light chain constant region. The polypeptide is fused to a
CC cytokine, i.e. interleukin-2 (IL2). The C-terminus of the polypeptide is
CC fused to the N-terminus of the cytokine. The polypeptides are in the form
CC of a whole antibody, a Fab antibody fragment, a single-chain Fv antibody
CC fragment, or a minibody. The polypeptide composition or a pharmaceutical
CC composition is useful for manufacturing a medicament for the treatment of
CC an autoimmune disease. The composition and method are useful for treating
CC proliferative disorders such as leukemia, lymphomas, rheumatoid
CC arthritis, and other autoimmune diseases. The present sequence represents
CC the VNC antibody heavy chain variable region used in the CD20-binding
CC polypeptide composition of the invention.

XX
XX New re-engineered or framework-patched immunoglobulin, useful for
FT preparing a composition for treating cancer, preferably Non-Hodgkin's
FT lymphoma or rheumatoid arthritis.
FT

XX
XX Example 2; Fig 10a; 66pp; English.
XX
XX The invention relates to a novel re-engineered or framework (FR)-patched
CC immunoglobulin, containing the heavy and/or light chain variable region
CC (VH/VL) sequences from a parent antibody. Within these chains, at least
CC one of the complementalised framework sequences, defined as FR1, FR2,
CC FR3 and FR4 are replaced, or patched, by the corresponding framework
CC sequences from the heavy and light chain immunoglobulin region of a
CC different species. The FR-patched immunoglobulin binds specifically to an
CC antigen with affinity comparable to, or within 3-fold of, that of the
CC parent immunoglobulin. The invention discloses the process of FR-patching
CC which is used to generate re-engineered immunoglobulin chains having one
CC or more complementarity determining regions (CDR's) from a donor
CC immunoglobulin and portions of framework sequences from one or more human
CC or primate immunoglobulins. The molecules obtained demonstrate cytostatic
CC activity as well as reduced or eliminated immunogenicity, whilst
CC maintaining the specificity and affinity of the parent antibody. The FR-
CC patched immunoglobulin is useful during the preparation of a composition
CC for treating cancer, preferably Non-Hodgkin's lymphoma and also during
CC the treatment of rheumatoid arthritis. Furthermore, the molecules of the
CC invention may also prove useful in gene therapy. The current sequence is
CC that of the chimeric FR-patched hplf5 alternatively designed VH protein
CC of the invention

PT Preparing human binding molecule specifically binding to human CD3
PT complex, comprises selecting molecules specifically binding to
PT extracellular domain of recombinant epsilon-chain and preparing
PT identified selected binding molecule.
XX
PS Disclosure; SEQ ID NO 201; 350pp; English.
XX
CC The invention relates to a method of preparing a human binding molecule,
CC fragment or its derivative which specifically binds to the human CD3
CC complex. The method comprises selecting molecules specifically binding to
CC or interacting with the extracellular domain of recombinant epsilon-chain
CC expressed independent of the human CD3 complex in the absence of other
CC members of the CD3 complex, from a population of candidate polypeptides
CC encoded by a library, selecting molecules from a population identified in
CC the above step for binding to the human CD3 complex, and preparing the
CC selected binding molecule. The binding molecule is an antibody molecule,
CC antibody fragment or its derivative or an antibody construct. Also
CC disclosed is a nucleic acid sequence encoding a human binding molecule, a
CC vector comprising such a nucleic acid, a host transformed or transfected
CC with such a vector, a composition comprising a human binding molecule,
CC and optionally a proteaceous compound capable of providing an
CC activation signal for immune effector cells, and a kit comprising a human
CC binding molecule. The method further involves recombinant expression of
CC the binding molecule, fragment or its derivative encoded by a nucleic
CC acid sequence chosen from the identified nucleic acid sequence, a nucleic
CC acid sequence hybridizing with the complementary strand of the identified
CC nucleic acid sequence under stringent hybridization conditions, and a
CC nucleic acid sequence which is degenerate as a result of the genetic code
CC to the above mentioned nucleotide sequences. The antibody molecule,
CC antibody fragment or its derivative or construct comprises a further
CC antigen-interaction-site and/or a further effector domain, and is
CC humanized and/or delaminized in an additional step. The further antigen-
CC interaction-site is specific for one or more cell surface molecule such
CC as a tumor specific marker. The antigen-interaction-site is further scFv,
CC which specifically binds to or interacts with an antigen chosen from
CC BpCAM, CCR5, CD19, EphA2, HER-2 neu, HER-3, HER-4, EGFR, PSMA, CEA, MUC-1
CC (mucin), MUC2, MUC3, MUC4, MUC5AC, MUC5B, MUC7, beta2MG, Lewis Y, CD30,
CC CD33, CD30, ganglioside GD3, 9-O-Acetyl-GD3, GM2, Globo H, fucosyl GM1,

CC Poly SA, GD2, carboanhydrase IX (MN/CA IX), CD44v6, Sonic hedgehog (Shh),
CC Mu-1, plasma cell antigen, (membrane-bound) IGE, melanoma chondroitin
CC sulfate proteoglycan (MSP), CCR8, TNF-alpha precursor, STEAP,
CC mesothelin, A33 antigen, prostate stem cell antigen (PSCA), Ly-6,
CC desmoglein 4, E-cadherin neopeptide, fetal acetylcholine receptor, CD25,
CC CA19-9 marker, CA-125 marker and muellerian inhibitory substance (MIS)
CC receptor type II, srm (sialylated Tn antigen; TAG-72), PAP (fibroblast
CC activated antigen), endostatin, EGFRvIII, Ig, SAS and CD63. In a human
CC binding molecule, the antibody molecule, antibody fragment or its
CC derivative or an antibody construct, comprises a heavy chain variable
CC (VH) region, a light chain variable (VL) region, complementarily
CC determining regions 1-3 (CDR1-3) of a VH-region, and CDR1-3 of a VL-
CC region. The method is useful for preparing a human binding molecule,
CC fragment or its derivative which specifically binds to the human CD3
CC complex. The human binding molecule polypeptide sequences, and the
CC polynucleotide sequences encoding them are useful for the prevention,
CC treatment or amelioration of proliferative disease, tumorous disease,
CC inflammatory disease, immunological disorder, autoimmune disease,
CC infectious disease, viral disease, allergic reactions, parasitic
CC reactions, graft-versus-host diseases or host-versus-graft diseases, or
CC for preparation of a pharmaceutical composition for the prevention,
CC treatment or amelioration of the above mentioned diseases. This sequence
CC represents a VH domain of a human antibody.

XX Depleting B cells from a mixed population of cells by contacting the
PT cells with a BlyS antagonist and a CD20 binding antibody, useful for
PT treating B cell malignancies and autoimmune disorders.
XX
XX Disclosure; SEQ ID NO 14; 114pp; English.
PS
XX The invention comprises a method of depleting B cells from a mixed
CC population of cells, the method involves contacting the mixed population
CC of cells with BlyS antagonist (e.g. an immunoadhesin) and a CD20 binding
CC antibody (e.g. hu2H7.v16). The method of the invention is useful for
CC treating B cell malignancies and autoimmune disorders, such as: non-
CC Hodgkin's lymphoma, Hodgkin's disease, follicular center cell lymphomas,
CC lymphocytic leukemia, hairy cell leukemia, rheumatoid arthritis, systemic
CC lupus erythematosus, Wegener's disease, inflammatory bowel disease,
CC idiopathic thrombocytopenic purpura, multiple sclerosis, asthma,
CC psoriasis, IgA nephropathy, myasthenia gravis, vasculitis, diabetes and
CC glomerulonephritis. The present amino acid sequence represents a
CC humanized anti-CD20 antibody (hu2H7.v16) heavy chain variable region.

XX New polypeptide or BlyS antagonist, for treating an immune-related
PT condition (e.g. rheumatoid arthritis, multiple sclerosis or systemic
PT lupus erythematosus) or cancer (e.g. leukemia or lymphoma).
XX
XX

PS Disclosure; SEQ ID NO 48; 226pp; English.
XX
XX The invention relates to a polypeptide comprising sequences of formula I,
CC I or II, (detailed in the claims) which are antagonists of BlyS (B cell
CC stimulator). Also included are a nucleic acid molecule encoding the
CC polypeptide, a vector comprising the nucleic acid molecule, a host cell
CC comprising the nucleic acid molecule, a method for producing a
CC polypeptide, a composition comprising the polypeptide optionally further
CC comprising a physiological carrier, a method for detecting an inhibitor
CC of BlyS binding to BR3 (BlyS receptor 3) in vitro, a method for
CC inhibiting BlyS binding to BR3 in a mammal, a method for inhibiting BlyS
CC signaling in a mammal and a method for treating an immune-related
CC condition or cancer in a mammal. The sequence of Formula I, II or III is
CC a sequence fused or conjugated to an immunoadhesion protein or to an
CC antibody, where the antibody is a Fab antibody, Fab' 2 antibody, a
CC scv antibody, a humanized antibody or multispecific antibody, e.g.
CC antibodies directed against CD20. The polypeptide is conjugated to an
CC agent, e.g. a growth inhibitory agent, a cytotoxic agent, a detection
CC agent, an agent that improves the bioavailability of the polypeptide and
CC an agent that improves the half-life of the polypeptide, where the
CC cytotoxic agent is a toxin, an antibiotic or a radioactive isotope. The
CC polypeptide, composition and methods are useful for treating an immune-
CC related condition (many examples given in the specification), e.g.
CC rheumatoid arthritis, multiple sclerosis or systemic lupus erythematosus
CC or for treating cancer (many examples given in the specification), e.g.
CC leukemia, lymphoma or myeloma. The present sequence represents the light
CC or heavy chain variable region of a humanized mouse antibody directed
CC against human CD20.

XX Detecting neutralizing antibodies to a therapeutic antibody, useful in
 PT evaluating the efficacy of (anti-CD20) immunotherapy, comprises
 PT determining the ability of a sample from a patient treated with the
 PT antibody to block antibody activity.

PS Disclosure; SEQ ID NO 2; 18pp; English.

XX The present invention relates to a method (M1) for detecting neutralizing
 CC antibodies to a therapeutic antibody. The method comprises contacting
 CC cells expressing the antigen recognized by the therapeutic antibody with
 CC complement and with a sample from a patient treated with the therapeutic
 CC antibody, and determining complement-dependent cytotoxicity (CDC) of the
 CC therapeutic antibody, where a reduction in CDC indicates the presence of
 CC neutralizing antibodies in the sample. Also claimed is a method (M2) for
 CC evaluating the efficacy of an antibody that binds CD20, e.g. humanized
 CC 2H7 v16 antibody. The present sequence is a heavy chain variable region
 CC sequence of humanized 2H7 v16 antibody. In (M2) the anti-CD20 antibody is
 CC preferably administered to treat an autoimmune disease or B cell
 CC malignancy. The autoimmune disease is rheumatoid arthritis, systemic
 CC lupus erythematosus, Wegeners disease, inflammatory bowel disease,
 CC idiopathic or immune thrombocytopenic purpura, thrombotic
 CC thrombocytopenic purpura, autoimmune thrombocytopenia, multiple
 CC sclerosis, psoriasis, immunoglobulin A nephropathy, IGM polyneuropathies,
 CC myasthenia gravis, vasculitis, diabetes mellitus, Reynaud's syndrome,
 CC Sjogren's syndrome, glomerulonephritis or autoimmune hemolytic anemia.
 CC The B cell malignancy is chosen from Hodgkin's disease, non-Hodgkin's
 CC disease, follicular center cell lymphoma, acute lymphocytic leukemia,
 CC chronic lymphocytic leukemia, hairy cell leukemia, plasmacytoid
 CC lymphocytic lymphoma, mantle cell lymphoma, AIDS or HIV-related lymphoma,
 CC multiple myeloma, central nervous system lymphoma, post-transplant
 CC lymphoproliferative disorder, Waldenstrom's mucosa-associated lymphoid
 CC tissue lymphoma and marginal zone lymphoma/leukemia.

 XX
 PT New non-naturally occurring single chain protein comprising polypeptides
 PT with binding domain, connecting regions and N-terminally truncated
 PT immunoglobulin, having immunological activity, useful for neutralizing
 PT infectious agent.
 XX
 PS Disclosure; Page 368; 590pp; English.
 XX
 XX The invention relates to a non-naturally occurring single chain protein
 CC (1) comprising a first polypeptide having a binding domain polypeptide
 CC capable of binding to a target molecule, the binding domain polypeptide
 CC comprising a heavy chain variable region, which comprises an amino acid
 CC substitution or deletion at one or more amino acid residues, a second
 CC polypeptide comprising a connecting region attached to the first
 CC polypeptide, and a third polypeptide comprising an N-terminally truncated
 CC immunoglobulin heavy chain constant region polypeptide attached to the
 CC second polypeptide, where the non-naturally occurring single-chain
 CC protein is capable of an immunological activity. Also included are
 CC reducing a target cell population in a subject (involving administering
 CC to the subject a protein that is less than 150 kD, which involves
 CC treating the target cell population with a first protein or peptide that
 CC binds to cells within the target cell population, and treating the target
 CC cell population with a second protein or peptide that capable of at least
 CC one of binding an Fc receptor, inducing target cell apoptosis, or fix
 CC complements, where the first protein or peptide molecule is directly
 CC connected to the second protein or peptide molecule or, optionally, the
 CC first protein or peptide molecule and the second protein or peptide
 CC molecule are linked by a third protein or peptide molecule, and where the
 CC protein molecule is not an antibody, a member of the TNF family or the
 CC TNF receptor family, and is not conjugated with a bacterial toxin, a
 CC cytotoxic drug, or a radioisotope), depleting cells in an animal
 CC (involving administering a modified IgG protein into the blood stream of
 CC an animal), a polynucleotide that encodes the polypeptide of the
 CC invention, a cell containing the polynucleotide, a recombinant vector
 CC capable of expressing the polypeptide, expressing the polypeptide, a
 CC composition comprising the polypeptide) in combination with one or more
 CC additional therapeutic compounds, displaying recombinant molecules (which
 CC molecules include a native or engineered immunoglobulin heavy chain
 CC variable region, the improvement comprising an immunoglobulin heavy chain
 CC region that includes one or more mutation, substitution, alteration,
 CC and/or deletion at one or more amino acid residue corresponding to
 CC positions 9, 10, 11, 12, 108, 110, and 112 in the heavy chain variable
 CC region) and a non-naturally occurring single chain antigen-binding
 CC protein comprising protein having a mutation chosen from a list given in
 CC the specification. The polypeptides of the invention comprise single
 CC chain antibodies (scfv, with or without mutated residues) linked via an
 CC immunoglobulin hinge region (wild-type or mutants where the cysteines are
 CC changed to serines/prolines and denoted (SSS-P/H, (CSC-S/H etc) to an

CC immunoglobulin (IgG, IgE or IgA) heavy chain constant region (CH) which
 CC may also have mutations in CH2 (e.g., T26N) or a truncated CH3 (e.g., T4
 CC CH3, a 4 amino acid deletion). The polypeptide may be further linked to a
 CC non-antibody protein such as the transmembrane and cytoplasmic tail
 CC (TN/CT) of caspase-3, caspase-8 or CD80. The fusion polypeptides are
 CC useful for neutralization of an infectious agent (where the infectious
 CC agent is a bacterium, a virus, a parasite, or a fungus) and also for
 CC treatment of cancer, immune disorders, Grave's disease, Hashimoto's
 CC disease, rheumatoid arthritis, systemic lupus erythematosus, Sjogren's
 CC syndrome, thrombocytopenic purpura, multiple sclerosis and myasthenia
 CC gravis. The present sequence is an antibody peptide or fragment (scfv,
 CC hinge, CH region, VL or VH) used in a fusion protein of the invention.

 PT New CD20-binding polypeptide (chimeric antibody), useful for treating
 PT autoimmune diseases and proliferative disorders such as leukemia,
 PT lymphomas and rheumatoid arthritis.
 XX
 PS Claim 1; Page: 64pp; English.
 CC The invention relates to a polypeptide composition having the ability to
 CC bind to CD20 antigen. The CD20-binding polypeptide composition is in the
 CC form of a chimeric antibody and further including a human heavy chain
 CC constant region and a human light chain constant region, where the human
 CC heavy chain constant region is an Igg constant region, specifically an
 CC IgG1 constant region, and where the human light chain constant region is
 CC a human kappa light chain constant region. The polypeptide is fused to a
 CC cytokine, i.e. interleukin-2 (IL2). The C-terminus of the polypeptide is
 CC fused to the N-terminus of the cytokine. The polypeptides are in the form
 CC of a whole antibody, a Fab antibody fragment, a single-chain Fv antibody
 CC fragment, or a minbody. The polypeptide composition or a pharmaceutical
 CC composition is useful for manufacturing a medicament for the treatment of
 CC an autoimmune disease. The composition and method are useful for treating
 CC proliferative disorders such as leukemia, lymphomas, rheumatoid
 CC arthritis, and other autoimmune diseases. The present sequence represents
 CC the modified leu16 antibody heavy chain variable region used in the CD20-
 CC binding polypeptide composition of the invention. Note: The present
 CC sequence is not shown in the specification but is derived from the leu16
 CC antibody heavy chain variable region sequence given in figure 1 (see
 CC seqid:9) and information given in claim 1.

 PT New CD20-binding polypeptide (chimeric antibody), useful for treating
 PT autoimmune diseases and proliferative disorders such as leukemia,

PT lymphomas and rheumatoid arthritis.
XX
PS Claim 8, Fig 3, 64pp; English.
XX
CC The invention relates to a polypeptide composition having the ability to
CC bind to CD20 antigen. The CD20-binding polypeptide composition is in the
CC form of a chimeric antibody and further including a human heavy chain
CC constant region and a human light chain constant region, where the human
CC heavy chain constant region is an IgG constant region, specifically an
CC IgG1 constant region, and where the human light chain constant region is
CC a human kappa light chain constant region. The polypeptide is fused to a
CC cytokine, i.e. interleukin-2 (IL2). The C-terminus of the polypeptide is
CC fused to the N-terminus of the cytokine. The polypeptides are in the form
CC of a whole antibody, a Fab antibody fragment, a single-chain Fv antibody
CC fragment, or a minibody. The polypeptide composition or a pharmaceutical
CC composition is useful for manufacturing a medicament for the treatment of
CC an autoimmune disease. The composition and method are useful for treating
CC proliferative disorders such as leukemia, lymphomas, rheumatoid
CC arthritis, and other autoimmune diseases. The present sequence represents
CC a CD20-binding polypeptide of the invention.

PT Treating an ocular disease in a mammal, such as uveitis, iritis, thyroid
XX eye disease, comprises administering a CD20 antagonist to the mammal.
XX
PS Disclosure; SEQ ID NO 2, 11pp; English.
XX
XX The invention relates to a method for treating an ocular disease by
CC administering a CD20 antagonist which comprises an antibody to the mammal
CC in an amount effective to treat the ocular disorder. The method and the

CC antagonist are useful for treating an ocular disease, such as uveitis,
CC iritis, thyroid eye disease or Grave's ophthalmology, ocular Behcet's
CC disease, ocular myasthenia gravis, ocular pemphigoid, autoimmune
CC retinopathy, onchocerciasis, episcleritis, scleritis, relapsing steroid
CC dependent optic neuritis, ocular involvement of Wegener's granulomatosis,
CC Sjogren's eye complication, melanoma associated retinopathy and cancer
CC associated retinopathy. The present sequence is the humanized 2H7
CC antibody variable heavy chain that binds to CD20 antigen.

XX New cytotoxically active CD3 specific binding construct comprises a first
XX domain specifically binding to human CD3 and an Ig-derived second binding
XX domain, useful for treating, preventing, or ameliorating, e.g.
XX proliferative disease.
XX
PS Disclosure; SEQ ID NO 170, 639pp; English.
XX
XX The invention relates to a cytotoxically active CD3 specific binding
XX construct comprising a first domain specifically binding to human CD3 and
XX an Ig-derived second binding domain. The CD3 specific binding construct
XX above or the construct produced by the process, nucleic acid molecule,
XX vector, or host is useful for the preparation of a pharmaceutical
XX composition for the prevention, treatment, or amelioration of a
XX proliferative disease, a tumor, an inflammatory disease, an immunological
XX disorder, an autoimmune disease, an infectious disease, viral disease,
XX allergic reactions, parasitic reactions, graft-versus-host diseases, or
XX host-versus-graft diseases. The cytotoxically active CD3 specific binding
XX construct is useful for treating, preventing, or ameliorating
XX proliferative disease, a tumor, an inflammatory disease, an immunological
XX disorder, an autoimmune disease, an infectious disease, viral disease,

CC allergic reactions, parasitic reactions, graft-versus-host diseases, or
CC host-versus-graft diseases. The present sequence represents the amino
CC acid sequence of a CD20 VH.

XX Treating autoimmune diseases, such as rheumatoid arthritis, psoriasis,
PT inflammatory bowel disease, Crohn's disease, ulcerative colitis, eczema,
PT asthma, lupus, atherosclerosis and diabetes, using CD20 antagonists or
PT antibodies.

XX Disclosure; SEQ ID NO 2; s1pp; English.

XX The invention relates to treating autoimmune disease in a patient. The
CC method involves detecting CD20 antigen (also called human B-lymphocyte-
CC restricted differentiation antigen, Bp35) or CD20-positive B cells in a
CC sample from the patient. When CD20 or CD20-positive B cells is detected
CC in the sample, a CD20 antagonist or antibody is administered to the
CC patient to treat the autoimmune disease. Also disclosed are CD20
CC proteins, nucleic acids and antibodies used in the methods of the
CC invention. The CD20 antagonist in treating autoimmune disease comprises
CC an antibody that is not conjugated with a cytotoxic agent and comprises
CC rituximab or humanized 2H7. The antibody is also conjugated with a
CC cytotoxic agent. The methods and compositions of the present invention
CC are useful for diagnosing or treating autoimmune diseases, such as
CC rheumatoid arthritis, psoriasis, inflammatory bowel disease, Crohn's
CC disease, ulcerative colitis, eczema, asthma, lupus, atherosclerosis,
CC aplastic anemia, Sjogren's syndrome, autoimmune thyroiditis, diabetes,
CC Guillain-Barre syndrome, glomerulonephritis and coronary artery disease.
CC The method consists essentially of administering the antagonist to the

CC mammal. The CD20 protein or nucleic acid is detected in the initial step.
CC The present sequence represents the heavy chain variable region sequence
CC of a humanized 2H7 antibody.

XX Treating transplant rejection, such as grafts from bone marrow, skin,
PT heart, liver, spleen, pancreas, thyroid, lung, kidney and tubular organs,
PT using CD20 antagonists or antibodies.

XX Disclosure; SEQ ID NO 2; 47pp; English.

XX The present invention relates to treating a patient suffering from
CC transplant rejection with a therapy based on the presence of CD20 in a
CC sample taken from the patient. The method of treating transplant
CC rejection in a patient comprises detecting CD20 or a CD20-positive B
CC cells in a sample from the patient, and where CD20 or CD20-positive B
CC cells is detected in the sample, administering a CD20 antagonist or
CC antibody to the patient to treat the autoimmune disease. Also disclosed
CC as new are CD20 proteins, nucleic acids and antibodies used in the
CC methods of the invention. The sample is from a biopsy taken from the
CC patient prior to transplantation or from a biopsy of a transplanted
CC organ. The solid organ transplant rejection is treated, where the solid
CC organ is a lung. The antagonist comprises an antibody that is not
CC conjugated with a cytotoxic agent. The antibody comprises rituximab or
CC humanized 2H7, and is conjugated with a cytotoxic agent. The CD20 protein
CC or nucleic acid is detected in the initial step. Acute or chronic
CC rejection is treated in the following step. CD20-antagonist. The methods
CC and compositions of the present invention are useful for diagnosing or
CC treating transplant rejection, such as grafts from bone marrow, skin,
CC heart, liver, spleen, pancreas, thyroid, lung, kidney and tubular organs.

CC The present sequence is the variable heavy peptide sequence of humanized
CC 2H7 antibody,
CC
CC

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RESULT 1
US-08-479-089A-8
Sequence 8, Application US/08479089A
Patent No. 6383487
GENERAL INFORMATION:
APPLICANT: Amlot, Peter L.
APPLICANT: Akbar, Arne N.
APPLICANT: Heinrich, Gunther
APPLICANT: Cammisuli, Salvatore
TITLE OF INVENTION: CD25 Binding Molecules
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: No. 6383487artis Corporation
STREET: 564 Morris Avenue
CITY: Summit
STATE: NJ
COUNTRY: USA
ZIP: 07901-1027
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/479, 089A
FILING DATE:
CLASSIFICATION:
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 07/669,545
FILING DATE:
PRIOR APPLICATION DATA:
APPLICATION NUMBER: GB 9019323
FILING DATE: 05-SEP-1990
ATTORNEY/AGENT INFORMATION:
NAME: Furman, Diane E.
REGISTRATION NUMBER: 31,104
REFERENCE/DOCKET NUMBER: 100-7617
TELECOMMUNICATION INFORMATION:
TELEPHONE: (908) 522-6924
TELEFAX: (908) 522-6955
INFORMATION FOR SEQ ID NO: 8:
SEQUENCE CHARACTERISTICS:
LENGTH: 17 amino acids
TYPE: amino acid

TOPOLOGY: linear
MOLECULE TYPE: protein
HYPOTHEICAL: NO
ANTI-SENSE: NO
FRAGMENT TYPE: internal

Patent No. 6521230
GENERAL INFORMATION:
APPLICANT: Amlot, Peter L.
APPLICANT: Akbar, Arne N.
APPLICANT: Heinrich, Gunther
APPLICANT: Cammisuli, Salvatore
TITLE OF INVENTION: CD25 Binding Molecules
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: No. 6521230artis Corporation
STREET: 564 Morris Avenue
CITY: Summit
STATE: NJ
COUNTRY: USA
ZIP: 07901-1027
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/669,545B
FILING DATE: 14-MAR-1991
CLASSIFICATION: 424
PRIOR APPLICATION DATA:
APPLICATION NUMBER: GB 9005962
FILING DATE: 16-MAR-1990
PRIOR APPLICATION DATA:
APPLICATION NUMBER: GB 9019323
FILING DATE: 05-SEP-1990
ATTORNEY/AGENT INFORMATION:
NAME: Furman, Diane E.
REGISTRATION NUMBER: 31,104
REFERENCE/DOCKET NUMBER: 100-7617
TELECOMMUNICATION INFORMATION:
TELEPHONE: (908) 522-6924
TELEFAX: (908) 522-6955
INFORMATION FOR SEQ ID NO: 8:
SEQUENCE CHARACTERISTICS:
LENGTH: 17 amino acids
TYPE: amino acid
TOPOLOGY: linear
MOLECULE TYPE: protein
HYPOTHEICAL: NO
ANTI-SENSE: NO
FRAGMENT TYPE: internal
US-07-669-545B-8

Query Match 82.0%; Score 73; DB 2; Length 17;
Best Local Similarity 81.2%; Pred. No. 3.7e-05;
Matches 13; Conservative 0; Mismatches 3; Indels 0; Gaps 0;

US-08-793-490-9
; Sequence 9, Application US/08793490
; Patent No. 5968824
; GENERAL INFORMATION:
; APPLICANT: Spruce, Barbara A
; APPLICANT: Prescott, Alan
; APPLICANT: Botlinger, Angelika
; APPLICANT: Dewar, Deborah A
; TITLE OF INVENTION: Agents for Inducing Apoptosis and Applications of Said
; TITLE OF INVENTION: Agents in Therapy
; FILE REFERENCE: ME A9701
; CURRENT APPLICATION NUMBER: US/08/793,490
; CURRENT FILING DATE: 1997-04-28
; EARLIER APPLICATION NUMBER: GB 9419285.3
; EARLIER FILING DATE: 1994-09-23
; EARLIER APPLICATION NUMBER: GB 9417444.8
; EARLIER FILING DATE: 1994-08-30
; EARLIER APPLICATION NUMBER: PCT/GB95/02037
; EARLIER FILING DATE: 1995-08-30
; NUMBER OF SEQ ID NOS: 11
; SOFTWARE: Patent In Ver. 2.0
; SEQ ID NO 9
; LENGTH: 106
; TYPE: PRT
; ORGANISM: Artificial Sequence
; FEATURE:
; OTHER INFORMATION: Description of Artificial Sequence: sequence
; OTHER INFORMATION: encoded by anti-proenkephalin immunoglobulin heavy
; OTHER INFORMATION: chain variable domain genes
US-08-793-490-9

Query Match 82.0%; Score 73; DB 1; Length 106;
Best Local Similarity 81.2%; Pred. No. 0.00028;
Matches 13; Conservative 0; Mismatches 3; Indels 0; Gaps 0;

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed.
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

New antibodies that bind to CD33, useful for treating a disease

associated with CD33 expression, such as myelodysplastic syndrome, acute

or chronic myeloid leukemia.

Claim 1; SEQ ID NO 3; 124pp: English.

The present invention describes an isolated anti-CD33 antibody or its

epitope-binding fragment comprising: (a) at least one complementarity-

determining region (CDR); or (b) at least heavy chain variable region

comprising 3 CDRs, and at least one light chain variable region, where the CDR has the ability to bind CD33. Also described: (1) an immunoglobulin comprising the antibody or its epitope-binding fragment linked to a drug or prodrug; (2) a composition comprising the antibody or epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical composition comprising the immunoglobulin, composition or the antibody defined above, or its epitope-binding fragment, and a pharmaceutical agent; (4) a diagnostic reagent comprising the antibody defined above, where the antibody or antibody fragment is labelled; (5) inhibiting the growth of a cell expressing CD33 by contacting the cell with the above defined antibody or its epitope-binding fragment, immunoglobulin, or (pharmaceutical) composition; (6) determining whether a biological sample contains a myelogenous cancer cell; (7) an improved antibody or its epitope-binding fragment that specifically binds to CD33; (8) an isolated polynucleotide encoding the antibody or its epitope-binding fragment defined above; (9) an isolated polynucleotide encoding a light or heavy chain of the antibody defined above or its epitope-binding fragment; (10) a recombinant vector comprising the polynucleotide; (11) a host cell transformed with the recombinant vector; (12) producing an antibody or its epitope-binding fragment having the ability to bind CD33; and (13) obtaining CD33 from a biological material. The anti-CD33 antibody has cytosolic activity. The antibody or its epitope-binding fragment, immunoglobulin, composition can be used for treating a subject having a disease where CD33 is expressed, such as myelodysplastic syndrome, acute myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia. It can also be used for inhibiting the growth of cells expressing CD33, and for in vivo imaging or as affinity purification agents. The present sequence represents the mouse anti-CD33 antibody My9-6 heavy chain CDR3, which is used in an example from the present invention.

New antibodies that bind to CD33, useful for treating a disease

associated with CD33 expression, such as myelodysplastic syndrome, acute

or chronic myeloid leukemia.

Claim 1; SEQ ID NO 3; 124pp: English.

The present invention describes an isolated anti-CD33 antibody or its

epitope-binding fragment comprising: (a) at least one complementarity-

determining region (CDR); or (b) at least heavy chain variable region

comprising 3 CDRs, and at least one light chain variable region, where

the CDR has the ability to bind CD33. Also described: (1) an

immunoglobulin comprising the antibody or its epitope-binding fragment

linked to a drug or prodrug; (2) a composition comprising the antibody or

epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical

composition comprising the immunoglobulin, composition or the antibody

defined above, or its epitope-binding fragment, and a pharmaceutical

agent; (4) a diagnostic reagent comprising the antibody defined above,

PT associated with CD33 expression, such as myelodysplastic syndrome, acute
PT or chronic myeloid leukemia.

PS Example 3; SEQ ID NO 53; 124pp; English.

XX The present invention describes an isolated anti-CD33 antibody or its
CC epitope-binding fragment comprising: (a) at least one complementarity-
CC determining region (CDR); or (b) at least heavy chain variable region
CC comprising 3 CDRs, and at least one light chain variable region, where
CC the CDR has the ability to bind CD33. Also described: (1) an
CC immunocjugate comprising the antibody or its epitope-binding fragment
CC linked to a drug or prodrug; (2) a composition comprising the antibody or
CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
CC composition comprising the immunocjugate, composition or the antibody
CC defined above, or its epitope-binding fragment, and a pharmaceutical
CC agent; (4) a diagnostic reagent comprising the antibody defined above,
CC where the antibody or antibody fragment is labelled; (5) inhibiting the
CC growth of a cell expressing CD33 by contacting the cell with the above
CC defined antibody or its epitope-binding fragment, immunocjugate, or
CC (pharmaceutical) composition; (6) determining whether a biological sample
CC contains a myelogenous cancer cell; (7) an improved antibody or its
CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
CC polynucleotide encoding the antibody or its epitope-binding fragment
CC defined above; (9) an isolated polynucleotide encoding a light or heavy
CC chain of the antibody defined above or its epitope-binding fragment; (10)
CC a recombinant vector comprising the polynucleotide; (11) a host cell
CC transformed with the recombinant vector; (12) producing an antibody or
CC its epitope-binding fragment having the ability to bind CD33; and (13)
CC obtaining CD33 from a biological material. The anti-CD33 antibody has
CC cytostatic activity. The antibody or its epitope-binding fragment,
CC immunocjugate, composition can be used for treating a subject having a
CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
CC myeloid leukemia, chronic myeloid leukemia or pro-myelocytic leukemia.
CC It can also be used for inhibiting the growth of cells expressing CD33,
CC and for in vivo imaging or as affinity purification agents. The present
CC sequence represents a mouse anti-CD33 antibody My9-6 heavy chain peptide,
CC which is used in an example from the present invention.

 CC a recombinant vector comprising the polynucleotide; (11) a host cell
 CC transformed with the recombinant vector; (12) producing an antibody or
 CC its epitope-binding fragment having the ability to bind CD33; and (13)
 CC obtaining CD33 from a biological material. The anti-CD33 antibody has
 CC cytostatic activity. The antibody or its epitope-binding fragment,
 CC immunocjugate, composition can be used for treating a subject having a
 CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
 CC myeloid leukemia, chronic myeloid leukemia or pro-myelocytic leukemia.
 CC It can also be used for inhibiting the growth of cells expressing CD33,
 CC and for in vivo imaging or as affinity purification agents. The present
 CC sequence represents a humanised mouse anti-CD33 antibody My9-6 heavy
 CC chain variable region, which is used in an example from the present
 CC invention.

CC The invention relates to novel genes (ABL89449-ABL90853) and proteins
 CC (ABB89040-ABB90444) useful for preventing, treating or ameliorating
 CC medical conditions e.g. by protein or gene therapy. The genes are
 CC isolated from a range of human tissues disclosed in the specification.
 CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
 CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
 CC ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow,
 CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
 CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
 CC anemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
 CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
 CC cardiovascular disorders such as myocardial ischemias; (d) wound healing
 CC; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
 CC infectious diseases such as viral, bacterial, fungal and parasitic
 CC infections. Note: The sequence data for this patent did not form part of

PT New polynucleotides encoding secreted human proteins, derived from human
PT adult testes, human fetal brain and human fetal kidney CDNA libraries.
XX
PS Claim 19; Page 74-77; 82pp; English.
XX
CC The present sequence is a secreted protein ycl4_1 derived from a human
CC foetal kidney (293 cell line) CDNA library. The sequence shows homology
CC to AA013642 and AA247816 sequences. It contains immunoglobulin and major
CC histocompatibility complex at its N-terminus. The clone ycl4_1 is
CC deposited under accession number ATCC 98724. The protein is predicted to
CC exhibit various activities including nutritional, cytokine and cell
CC proliferation/differentiation, immune stimulating or suppressing,
CC haematopoiesis regulating, haemostatic and thrombolytic, anti-
CC inflammatory, tumour inhibition, activin/inhibin activity etc. These
CC biological activities make the protein suitable for treating, preventing
CC or ameliorating medical conditions in humans and animals

PT Novel polynucleotides and proteins having biological activities which

PT make them suitable for treating, preventing or ameliorating medical
PT conditions in humans or animals.
XX
PS Claim 31; Page 595-598; 730pp; English;
XX
CC The present invention describes human secreted proteins encoded by
CC polynucleotides obtained from adult testes, foetal brain, adult brain,
CC brain (foetal and adult), foetal kidney, adult spleen, and adult thymus
CC CDNA libraries. The polynucleotides and proteins are predicted to have
CC biological activities which would make them suitable for treating,
CC preventing or ameliorating medical conditions in humans and animals.
CC Suggested activities include nutritional activity, cytokine and cell
CC proliferation/differentiation activity; immune stimulating (e.g. as
CC vaccines) or suppressing activity; haematopoiesis regulating activity,
CC tissue growth activity; activin/inhibin activity; chemotactic/
CC chemokinetic activity; haemostatic and thrombolytic activity; receptor/
CC ligand activity; anti-inflammatory activity; cadherin/tumour invasion
CC suppressor activity; and tumour inhibition activity. The polynucleotides
CC are also stated to be useful for gene therapy. Therapeutic compositions
CC are also presently valuable for veterinary applications. AA252475 to
CC AA252581 encode human secreted proteins, and AA073390 to AA073500
CC represent human secreted proteins, given in the present invention

 CC AAA16618 to AAA16697 encode the human secreted proteins given in AA94898
 CC to AA94980, isolated from human adult brain, adult thyroid, adult
 CC retina, foetal carcinoma, adult blood, adult neural, foetal kidney, adult
 CC placenta, adult testis, whole embryo, adult cartilage, kidney, foetal
 CC brain, adult thymus, foetal placenta, adult uterus, adult tumour, and
 CC adult bladder, cDNA libraries. The polynucleotides and proteins are
 CC predicted to have biological activities which would make them suitable
 CC for treating, preventing or ameliorating medical conditions in humans and
 CC animals. The polynucleotides can be used as markers for tissues in which
 CC the protein is preferentially expressed, as molecular weight markers on
 CC Southern gels, and as chromosome markers or tags to identify chromosomes
 CC or to map gene positions. The proteins can be used in the treatment of
 CC immune deficiencies and disorders, such as severe combined
 CC immunodeficiency (SCID), as well as viral, bacterial, fungal and other
 CC infections. These infections include human immunodeficiency virus (HIV),
 CC hepatitis, herpesviruses, mycobacteria, Leishmania spp., malaria and
 CC candidiasis. The proteins can be used to treat autoimmune disorders such
 CC as connective tissue disease, multiple sclerosis, systemic lupus
 CC erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation,
 CC Guillain-Barre syndrome, autoimmune thyroiditis, insulin dependent
 CC diabetes mellitus, myasthenia gravis, graft-versus-host-disease and
 CC autoimmune inflammatory eye disease. The proteins can also be used to
 CC treat allergic conditions, such as asthma. AAA16698 to AAA16774 represent
 CC probes for the human secreted proteins from the present invention

 PT Isolating ribonucleoprotein complex, by contacting RNA affinity substrate
 PT having ribonucleoprotein assembly sequence and affinity tag, with protein
 PT mixture, subjecting complex formed to chromatography, affinity selection.
 XX
 PS Claim 24; Page; 39pp; English.
 XX
 CC The invention relates to forming (M1) an isolated ribonucleoprotein (RNP)
 CC complex (C), involves contacting an RNA affinity substrate (S) comprising
 CC an RNP assembly sequence (AS) and an affinity tag, with a protein mixture
 CC to permit formation of (C) on AS, subjecting (C) to chromatographic
 CC separation, and subjecting (C) to affinity selection, where the affinity
 CC tag (e.g. bacteriophage MS2 coat protein in a fusion protein with E. coli
 CC maltose binding protein) binds to an affinity matrix. Also included are
 CC an isolated spliceosome preparation (isolated by (M1)), a RNA comprising
 CC an RNP complex binding site and at least one phage coat protein
 CC recognition site, a nucleic acid encoding the RNA, and treating (M2) a
 CC subject having a disorder associated with abnormal RNP complexes (by
 CC obtaining a sample of cells from a subject, purifying RNP complexes from
 CC the cells of the subject by (M1), determining the presence in the
 CC purified RNP complexes of one or more proteins, and normalising the
 CC amount of RNPs in the subject. (M1) is useful for forming an isolated RNP
 CC complex selected from a spliceosomal complex (selected from E, A, B and C
 CC complex), an hnRNP complex, an mRNA export complex, an mRNA localisation
 CC complex, an RNA editing complex, an intron complex, or an H complex. (M1)
 CC is useful in a diagnostic assay for determining whether a subject has
 CC abnormal RNP complexes. (M2) is useful for treating a subject having a
 CC disorder associated with abnormal RNP complexes. (M1) is useful for
 CC forming an isolated RNP complex such as a telomerase complex, a fragile X
 CC protein complex, a reverse transcriptase complex or a gene splicing
 CC complex. The present sequence represents a known human spliceosome
 CC associated protein (SAP) isolated by the methods of the invention. Note:
 CC The present sequence is not shown in the specification but was obtained
 CC from Genbank or Swissprot using the information provided in table 1 of
 CC the specification

 CC separation, and subjecting (C) to affinity selection, where the affinity
 CC tag (e.g. bacteriophage MS2 coat protein in a fusion protein with B. coli
 CC maltose binding protein) binds to an affinity matrix. Also included are
 CC an isolated spliceosome preparation (isolated by (M1)), a RNA comprising
 CC an RNP complex binding site and at least one phage coat protein
 CC recognition site, a nucleic acid encoding the RNA, and treating (M2) a
 CC subject having a disorder associated with abnormal RNP complexes (by
 CC obtaining a sample of cells from a subject, purifying RNP complexes from
 CC the cells of the subject by (M1), determining the presence in the
 CC purified RNP complexes of one or more proteins, and normalising the
 CC amount of RNPs in the subject. (M1) is useful for forming an isolated RNP
 CC complex selected from a spliceosomal complex (selected from E, A, B and C
 CC complex), an hnRNP complex, an mRNA export complex, an mRNA localisation
 CC complex, an RNA editing complex, an intron complex, or an H complex. (M1)
 CC is useful in a diagnostic assay for determining whether a subject has
 CC abnormal RNP complexes. (M2) is useful for treating a subject having a
 CC disorder associated with abnormal RNP complexes. (M1) is useful for
 CC forming an isolated RNP complex such as a telomerase complex, a fragile X
 CC protein complex, a reverse transcriptase complex or a gene splicing
 CC complex. The present sequence represents a putative novel human
 CC spliceosome associated protein (SAP) isolated by the methods of the
 CC invention. Note: The present sequence is not shown in the specification
 CC but was obtained from Genbank or Swissprot using the information provided
 CC in table 2 of the specification

 PT Novel prostatic-cancer marker polypeptide, useful for diagnosing
 PT prostatic-cancer or androgen independent prostatic-cancer.
 XX
 PS Claim 1; SEQ ID NO 31; 43pp; Japanese.
 XX
 CC The invention relates to a novel prostatic cancer marker polypeptide
 CC comprising any one of 35 fully defined amino acid sequences (SEQ ID Nos:1
 CC -35) as given in specification. Prostate-specific antigen (PSA) is
 CC currently widely used as a prostatic tumor marker. Certain problems are
 CC associated with diagnosis using PSA, however, such as false positives and
 CC ambiguity between benign and malignant results. The polypeptides of the
 CC invention demonstrate cytostatic activity and may be useful for
 CC diagnosing and treating prostatic cancer or androgen-independent
 CC prostatic cancer. The polypeptides may be utilized for immunotherapy. The
 CC current sequence is that of the human prostatic cancer marker,
 CC spliceosome-associated protein 130 of the invention.

PT Increasing vitamin E content of plants, useful e.g. for preparing foods
PT or pharmaceuticals, by transgenic expression of an algal tocopherol
PT synthesis enhancing protein-2.
XX
XX
PS Claim 2; SEQ ID NO 25; 92pp; German.
XX

CC This invention describes a novel method for increasing the vitamin E
CC content in a plant (or its tissue, organs, parts, cells or replicative
CC material) comprising the transgenic expression of *Synechocystis* sp. PCC
CC 6803 Tocen-2 (tocopherol synthesis enhancing protein-2), a key factor in
CC vitamin E synthesis. The plant transfected is an oil-producing plant,
CC e.g. *Brassica napus*, *Cocos nucifera*, *Glycine max*, *Gossypium hirsutum*,
CC *Olea europaea*, *zea mays* or almond. The expression construct includes a
CC constitutive or seed-specific promoter; it may also include a promoter
CC that allows expression in organisms other than plants, e.g. *Escherichia*
CC *coli*. Transgenic plants that contain Tocen-2 are used for production of
CC vitamin E (particularly), oils, fats, free fatty acids and their
CC derivatives, also for preparation of foods, animal feeds, seeds,
CC pharmaceuticals and fine chemicals. The invention also describes an
CC expression vector, pSUN2/Nitp/slrl263/ocs which comprises, in pSUN2, a
CC cassette containing (i) the constitutive nitrilase-1 promoter of
CC *Arbidiopsis thaliana*; (ii) sequence encoding the rbcS transalt peptide;
CC (iii) the amplified *Synechocystis* PCC6803 open reading frame slr1263, and
CC (iv) the octopine synthase terminator. It was used to transform
CC *Agrobacterium tumefaciens* and the cells used to inoculate tobacco leaf
CC segments. These were regenerated to plants, all of which had tocopherol
CC and tocotrienol content greater than in wild-type plants. This sequence
CC represents an analogue of the *Synechocystis* sp. PCC 6803 Tocen-2 protein
CC isolated from *Anabaena* sp. PCC7120 described as alr0436 in the disclosure
CC of the invention.

XX Method for disrupting targeted gene in genome of organism particularly
PT thermostable bacterium and with genome chips for analysis, applicable in
PT studying gene structure and functions.
XX
PS Claim 9; SEQ ID NO 889; 598bp; Japanese.
XX
CC This invention relates to a novel method for targeting disruption of an
CC arbitrary gene in a genome of an organism which comprises providing the
CC whole sequential data of the genome of such organism, selecting at least
CC 1 arbitrary region in the sequence, providing a vector that contains a
CC sequence homologous with the selected region and a marker gene,
CC transformation, and homologous recombination. The genome is preferably
CC the genome of a hyperthermostable archaeobacterium, particularly
CC Thermococcus kodakarensis KOD1. The method is for targeting the
CC disruption of a gene in the genome of an organism, which is applicable in
CC studying gene structure and functions as well as enzyme activities of
CC encoded proteins and useful in medicine, forensic science, food or drug
CC inspection, molecular biology and immunology. With this method, the
CC efficiency and reliability. The present sequence is that of a protein
CC encoded by the genome of Thermococcus kodakarensis which was derived
CC using the method of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at

XX Identifying molecules, which mimic an idiotype of an autoimmune disease-
PT associated autoantibody, useful for treating an autoimmune disease, e.g.
PT myasthenia gravis, comprises the use of immunoglobulins purified from
PT pooled plasma.
XX
PS Example 3; Page 11; 43bp; English.
XX
CC The present invention describes a method (M1) for identifying molecules
CC (I) which mimic an idiotype of an autoimmune disease-associated
CC autoantibody (autoantibodies). M1 comprises purifying autoantibodies from
CC sera of one or more patients afflicted with the autoimmune disease,
CC binding the autoantibodies to a solid phase to form an affinity matrix,
CC contacting pooled plasma or B cells comprising immunoglobulins with the
CC affinity matrix followed by removal of unbound plasma components, eluting
CC bound immunoglobulins, being anti-idiotypic antibodies (anti-Id) to
CC autoantibodies, from the matrix, providing a molecular library comprising
CC several molecule members, and contacting the anti-Id with the molecular
CC library and isolating the bound molecules, which are bound by the anti-
CC Id, the bound molecules being molecules that mimic an idiotype of
CC autoantibodies. (I) have immunosuppressive, antiinflammatory,
CC dermatological, muscular, neuroprotective, CNS, anti-HIV, neurotropic,
CC neuroleptic, antithyroid, thyromimetic, antidiabetic, anabolic,
CC hypertensive, endocrine, antipneumatic, hepatotropic, virucide,
CC antianaemic, haemostatic, gastroenteric, antitumor, antinfertility,
CC antipneumatic, antiarthritic, nephrotropic, antiarteriosclerotic,
CC cardiac, ophthalmological, uropathic and antipyretic activities, and can
CC be used in vaccines. The molecules (I), anti-Id and pharmaceutical
CC compositions of the present invention can be used for treating a patient
CC afflicted with an autoimmune disease. The molecules (I) are also useful
CC for screening chemical compounds for their potential use in treating an
CC autoimmune disease. The present sequence is given in the exemplification
CC of the present invention.

DR Novel polynucleotide encoding cap binding protein useful for altering
XX abscisic acid signaling, stomatal pore opening or closing, water loss,
PT senescence, anion channel activity and/or drought tolerance, in a plant.
XX Example 1; Page 146-147; 150pp; English.
XX The present invention relates to novel cap binding protein 80 (CBP80) and
CC polynucleotides encoding such proteins. CBP80 sequences are useful for
CC producing drought tolerant plants and for altering abscisic acid
CC signaling, stomatal pore opening or closing, water loss, senescence,
CC anion channel activity and/or drought tolerance, in a plant by over- or
CC under- or knock out of expression of CBP80. Transgenic plant of the
CC invention are useful for breeding of improved plant lines that for
CC example increase the effectiveness such as conventional methods such as
CC herbicide or pesticide treatment or allow to dispense with the methods
CC due to their modified genetic properties. The transgenic plants produced
CC are useful in traditional agriculture to possess traits beneficial to the
CC grower (e.g., agronomic traits such as resistance to water deficit, pest
CC resistance, herbicide resistance or increased yield) or beneficial to the
CC consumer of the grain harvested from the plant (e.g. improved nutritive
CC content in human food or animal feed, increased vitamin, the production
CC of antibodies) or beneficial to the food processor (e.g., improved
CC processing traits). The present sequence is a rice protein used to
CC isolate rice CBP80 orthologues. This sequence is used in the
CC exemplification of the invention

XX
CC The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?docid:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This is the amino acid sequence of a plant full length insert
CC polypeptide that can be used in the recombinant DNA construct of the
CC invention.

 PT senescence; anion channel activity and/or drought tolerance, in a plant.
 XX
 XX Claim 12; Page 124-127; 150pp; English.
 PS
 XX The present invention relates to novel cap binding protein 80 (CBP80) and
 CC polynucleotides encoding such proteins. CBP80 sequences are useful for
 CC producing drought tolerant plants and for altering abscisic acid
 CC signaling, stomatal pore opening or closing, water loss, senescence,
 CC anion channel activity and/or drought tolerance, in a plant by over- or
 CC under- or knock out of expression of CBP80. Transgenic plant of the
 CC invention are useful for breeding of improved plant lines that for
 CC example increase the effectiveness such as conventional methods such as
 CC herbicide or pesticide treatment or allow to dispense with the methods
 CC due to their modified genetic properties. The transgenic plants produced
 CC are useful in traditional agriculture to possess traits beneficial to the
 CC grower (e.g., agronomic traits such as resistance to water deficit, pest
 CC resistance, herbicide resistance or increased yield) or beneficial to the
 CC consumer of the grain harvested from the plant (e.g. improved nutritive
 CC content in human food or animal feed, increased vitamin, the production
 CC of antibodies) or beneficial to the food processor (e.g., improved
 CC processing traits). The present sequence is rice CBP80 protein

 PT New recombinant DNA construct comprising a promoter positioned to provide
 PT for expression of a polynucleotide encoding a polypeptide from a
 PT microbial source, useful for producing plants with improved properties.
 XX
 PS Claim 1; SEQ ID NO 3892; 122pp; English.

CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of

CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs; or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX
XX      Changing the composition of phospholipid(s) produced by host cells -
XX      PT produces phospholipid(s) of better usability than natural
XX      PT phospholipid(s), applicable in food, medicine etc.
XX
XX      Example 1; Page 12-17; 22pp; Japanese.
XX
XX      A novel method has been developed for changing the composition of
XX      CC phospholipids produced by host cells. The method comprises transforming
XX      CC host cells with a recombinant DNA having a sequence antisense to the
XX      CC phospholipase D gene which generates mRNA which prevents the expression
XX      CC of phospholipase D gene by hybridizing with the phospholipase D mRNA from
XX      CC the host cell, and expressing the antisense gene in the host cells. The
XX      CC present sequence represents phospholipase D, which was isolated from
XX      CC rice. Changing the composition of phospholipids produced by host cells,
XX      CC produces phospholipids of better usability than natural phospholipids,
XX      CC applicable in food, medicine

PS
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides) therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (AB16176-ABL30511), expressed DNA
CC sequences (AB101840-AB16175) and the encoded proteins (AB57737-
CC AB872072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX Screening for sleep altering composition for treating sleep disorders, by
PT contacting a Drosophila cell with a candidate compound and measuring the
PT effect of the compound on expression level or activity of a gene product.
XX
XX Disclosure; SEQ ID NO 50; 268pp; English.
PS
XX The invention describes a method of screening for a sleep altering
CC composition comprising contacting a Drosophila cell with a candidate
CC compound and measuring the effect of the compound on expression level or
CC activity of a gene product, where a change in the expression level or
CC activity of the gene product indicates that the candidate compound is a
CC sleep altering composition. Also described are: reducing the need for
CC sleep in a subject; promoting recovery from sleep loss in a subject;
CC inhibiting sleep in a subject; increasing sleep in a subject; and
CC identifying the basis of a sleep disorder in a subject. The method is
CC useful for screening for sleep altering composition. It is useful for
CC identifying compositions for treating sleep disorders and sleep
CC deprivation. Sleep altering compositions are useful for reducing the need
CC for sleep in a subject, promoting recovery from sleep loss in a subject,
CC inhibiting sleep in a subject, increasing sleep in a subject, and
CC identifying the basis of a sleep disorder in a subject. This is the amino
CC acid sequence of a protein displaying altered expression in a sleep
XX disorder.

XX Novel isolated nucleic acid encoding *Pseudomonas aeruginosa* polypeptide,
PT useful as molecular targets for diagnostics, prophylaxis and treatment of
XX pathological conditions resulting from bacterial infection.
PS Disclosure; SEQ ID NO 28792; 455bp; English.
XX The invention relates to *Pseudomonas aeruginosa* polypeptides and the
CC polynucleotides encoding them. The sequences are useful in diagnosis and
CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a *P. aeruginosa* nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-*P. aeruginosa* drugs, as templates for recombinant
CC production of *P. aeruginosa*-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of *P. aeruginosa*-caused
CC infection, and in detection of *P. aeruginosa* sequences or other sequences
CC of *Pseudomonas* species using biochip technology. Sequences ABO67826-
CC ABO84396 represent *P. aeruginosa* polypeptides of the invention. Note: The
CC sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format from USPTO at
CC seqdata.uspto.gov/sequence.html

XX New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from *Drosophila* and for elucidating cell signalling and cell-cell
XX interactions.
PS Disclosure; SEQ ID NO 22407; 21pp + Sequence Listing; English.
XX

CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from *Drosophila*. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (AB116176-AB130511), expressed DNA
CC sequences (AB101840-AB116175) and the encoded proteins (ABBS7737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New recombinant DNA constructs useful in the field of biochemistry and
PT genetics, and in particular for producing transgenic plants with improved
PT biological characteristics.
XX
PS Claim 2; SEQ ID NO 8131; 14pp; English.
XX
XX The invention relates a recombinant DNA construct comprising a
CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
CC Arabidopsis, wheat and rape but the specification does not indicate which
CC sequences is derived from which organism. Also included is a method of
CC producing a plant having an improved property, comprising transforming a
CC plant with a recombinant DNA construct comprising a promoter region
CC functional in a plant cell operably joined to a polynucleotide encoding a
CC polypeptide associated with the property, and growing the transformed
CC plant. The property is selected from improving plant cold tolerance, for
CC manipulating growth rate in plant cells by modification of the cell cycle

CC pathway, for improving plant drought tolerance, for providing increased
 CC resistance to plant disease, for galactomannan production, for production
 CC of plant growth regulators, for improving plant heat tolerance, for
 CC improving plant tolerance to herbicides, for increasing the rate of
 CC homologous recombination in plants, for lignin production, for improving
 CC plant tolerance to extreme osmotic conditions, for improving plant
 CC tolerance to pathogens or pests, for yield improvement by modification of
 CC photosynthesis, for modifying seed oil yield and/or content, for
 CC modifying seed protein yield and/or content, for yield improvement by
 CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake
 CC and for yield improvement by providing improved plant growth and
 CC development under at least one stress condition. The polynucleotide may
 CC also encode a plant transcription factor. The methods and compositions of
 CC the present invention are useful in the field of biochemistry and
 CC genetics, in particular for producing transgenic plants with improved
 CC biological characteristics such as increased yield, improved nitrogen
 CC flow, increasing plant tolerance to cold or heat, improving plant
 CC tolerance to extreme osmotic and drought conditions, and improving plant
 CC tolerance to plant pests or pathogens. They can also be used in physical
 CC arrays of molecules, plant breeding markers, computer-based storage and
 CC analysis systems. The present sequence is one of the 554 plant protein
 CC sequences of the invention. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from USPTO at
 CC seqdata.uspto.gov/sequence.html?docID=20040216190.

RN [5]
RP -1- FUNCTION: Subunit of the splicing factor SF3B required for 'A'
RP complex assembly formed by the stable binding of U2 snRNP to the
RP branchpoint sequence (BPS) in pre-mRNA. Sequence independent
RP binding of SF3A/SF3B complex upstream of the branch site is
RP essential, it may anchor U2 snRNP to the pre-mRNA. May also be
RP involved in the assembly of the 'B' complex. Belongs also to the
RP minor U12-dependent spliceosome, which is involved in the splicing
RP of rare class of nuclear pre-mRNA intron.
CC -1- SUBUNIT: Component of splicing factor SF3B which is composed of
CC four subunits; SF3B4/SAP49, SF3B3/SAP130, SF3B2/SAP145,
CC

```

```
CC SF3B1/SAP155. SF3B associates with the splicing factor SF3A and a
CC 12S RNA unit to form the U2 small nuclear ribonucleoproteins
CC complex (U2 snRNP). Interaction between SF3B3 and SF3B1 is tighter
CC than the interaction between SF3B3 and SF3B2. Component of the
CC STRGA transcription coactivator-HNT complex, at least composed of
CC SF3B3/SAP130, GCN5L2, SYAF5gamma/KIAA0764, TAF5L, TADA3L,
CC TAF10, TAF12, TRRAP and TAF9.
CC -1- INTERACTION:
CC P08633:HCK; NBEXP=1; InAct=EBI-346977, EBI-346340;
CC -1- SUBCELLULAR LOCATION: Nuclear.
CC -1- SIMILARITY: Belongs to the RSEI family.

RN [1]
RP NUCLEOTIDE SEQUENCE.
RC STRAIN=cv. Bspace-1; TISSUE=leaf;
RA el Maarouf H., Pham Thi A.T., Garell M., D'Arcy-Lameta A.,
RA Zuliy-Fodil Y.,
RA Submitted (MAR-1997) to the EMBL/GenBank/DBJ databases.
CC -1- FUNCTION: Hydrolyzes glycerol-phospholipids at the terminal
CC phosphodiesteric bond. Plays an important role in various cellular
CC processes.
CC -1- CATALYTIC ACTIVITY: A phosphatidylcholine + H(2)O = choline + a
CC phosphatidate.
CC -1- COFACTOR: Calcium (By similarity).
CC -1- DOMAIN: C2 domain is a calcium-binding fold, and the binding
CC promotes the protein association with membranes. A lower affinity
CC toward calcium can be anticipated for PLD alpha due to the absence
CC of two potential calcium ligands.
CC -1- SIMILARITY: Belongs to the phospholipase D family. C2-PLD
CC subfamily.
CC -1- SIMILARITY: Contains 1 C2 domain.
CC -1- SIMILARITY: Contains 2 PLD phosphodiesterase domains.
CC -----

RA Zimmer A., Zody M., Lander E.;
RT "the genome sequence of Ustilago maydis";
RL Submitted (Feb-2004) to the EMBL/GenBank/DBJ databases.
CC -! CAUTION: The sequence shown here is derived from an
CC EMBL/GenBank/DBJ whole genome shotgun (WGS) entry which is
CC preliminary data.
CC -! CATALYTIC ACTIVITY: ATP + ubiquitin + protein lysine = AMP +
CC diphosphate + protein N-ubiquityllysine.
CC -! PATHWAY: Ubiquitin conjugation; second step.
CC -! SIMILARITY: Belongs to the ubiquitin-conjugating enzyme family.

CC -!- FUNCTION: Directs the termination of nascent peptide synthesis
(translaction) in response to the termination codons UAA, UAG and
UGA (by similarity).
CC -!- SUBUNIT: Heterodimer of two subunits, one of which binds GTP (by
similarity).
CC -!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
CC -!- SIMILARITY: Belongs to the eukaryotic release factor 1 family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
